

# Arboviral Surveillance Report

## September 10, 2018

### Surveillance

This report provides data on week 36 of surveillance for West Nile virus (WNV) in mosquitoes and includes data on other surveillance indicators. We have placed 81 gravid and BG sentinel traps throughout the City of Chicago and continue to monitor them twice a week for the duration of the mosquito-breeding season. Three (3) mosquito pools tested positive for WNV within our collections in Chicago.

### Mosquitoes (data from 81 traps)

<b>Week 36 (09/02/18 – 09/08/18)</b>	
Total Collections (Number of Traps X Frequency of Collection)	81
Number of Female <i>Culex</i> Trapped and Tested	539
Number of Pools Tested	81
Number of Pools Positive	3
Number of Community Areas with Positive Mosquito Pools	3
<b>Cumulative Totals</b>	
Total Collections (Number of Traps X Frequency of Collection)	1,999
Number of Female <i>Culex</i> Trapped and Tested	16,529
Number of Pools Tested	1,514
Number of Pools Positive	207
Number of Community Areas with Positive Mosquito Pools	34

***Aedes albopictus* (cumulative):** 504 females and 216 males

**Humans:** 22 cases

## Risk Assessment

The risk of human West Nile virus infection in the City of Chicago is moderate. Residents are urged to take personal protective measures against getting mosquito bites.

## Larval and Adult Mosquito Control Efforts

Surveillance crews are monitoring catch basins for the remainder of the summer to assess the level of control.
