Barbara A. Lumpkin
Chief Procurement Officer

Re: Operational Emergency Purchase Order Authorization

Vendor Number:	1070541	Amount:	\$195,118.00
PO Number:	12582	RX Number:	29128

Pursuant to Section 2-92-644 of the Municipal Purchasing Act, I am authorizing you to make an Emergency purchase from 411 Computers, Inc. Based upon information received from members of your staff, I have determined that this procurement is necessary to meet bona fide operating emergencies.

You are hereby authorized to procure an 'IBM i-Series mid-range Computer' in the amount of \$195,118.00 as requested in your letter dated July 28, 2006 and your revised letter of August 25, 2006. Any amount in excess of the \$195,118.00 approved here will be subject to additional authorization and will be limited so as not to exceed the \$250,000.00 limit established by statute.

RE: Request for Emergency Contract Requisition 29128-Additional Information

The Department of Finance seeks an emergency contract for the following:

Goods and Services

IBM i-Series mid-range computer as follows:

Item	Description
9406	System Unit i520 Enterprise Edition (minimum 3800 CPW) 1.75TB of total DASD 8GB of system memory Rack mounted with dual power Comparable communications lines from 820 system All system software from 9406-BBC8B to be transferred
3581	Tape drive
9910	Uninterruptible Power System
D5762LL	HATS Software
Services	System smooth start
Services	HATS implementation

Explanation of the situation

The I series is the repository of all of the City's time and attendance data and is the source of payroll data entry for all City departments.

Explanation of emergency

The current i-Series mid range computer has reached its operational capacity. The interactive feature of the existing processor is undersized and its period of usefulness has expired. Repeatedly, the interactive activity exceeds the systems allowed threshold, resulting in erratic response times and diminished system throughput. The major effect is when operating departments are completing their CATA edits which input CHIPPS payroll.

This is an operational emergency for the Department of Finance's mandate to provide payroll for approximately 38,000 City employees providing public safety, health and human services to the citizens of Chicago. The I-series provides the data input for payroll.

The Office of the City Comptroller provides this vital payroll function for the City.

RE: Request for Emergency Contract Requisition 29128

06 AUG -8 PM 6:37

The Department of Finance seeks an emergency contract for the following:

Goods and Services

IBM i-Series mid-range computer as follows:

Item	Description
9406	System Unit i520 Enterprise Edition (minimum 3800 CPW) 1.75TB of total DASD 8GB of system memory Rack mounted with dual power Comparable communications lines from 820 system All system software from 9406-BBC8B to be transferred
3581	Tape drive
9910	Uninterruptible Power System
D5762LL	HATS Software
Services	System smooth start
Services	HATS implementation

Explanation of the situation

The I series is the repository of all of the City's time and attendance data and is the source of payroll data entry for all City departments.

Explanation of emergency

The current i Series mid-range computer is at its maximum utilization and has to be replaced for the following reasons:

1. The interactive feature of the existing processor is undersized and its period of usefulness has expired. Repeatedly, the interactive activity exceeds the systems allowed threshold, resulting in erratic response times and diminished system throughput. Documented instances of this are as recent as 17-Jul-2006 and as dated as 03-Apr-2006. The impact of this issue on timely payroll processing is significant, as it occurs routinely and predictably at a critical point in the payroll cycle, on the day the payroll runs and editors are completing edits. When maximum efficiency is needed is when the system performs at its worst, placing unnecessary burdens on a variety of payroll personnel throughout the City's departments. Efficient and timely processing at all points in the payroll cycle is crucial and requires an upgrade of both the processor and its associated interactive feature.
2. The existing tape drive is obsolete. Its antiquated hardware architecture, software programs and the associated tape medium is problematic. The most serious problem is failed backups; the most recent of which occurred 18-Jul-2006. On 24-Jul-2006, the tape drive failed forcing a service call from IBM to repair the tape drive. The potential repercussions of an incomplete backup are huge. Should an unrecoverable failure to the i-Series occur, all data needed to continue processing payroll and tracking time and

attendance may not be available for restoration. Also a main concern is the quality of backups. The slow speed at which the tape drive performs prevents a full "Save System" backup from occurring nightly. And while a partial "Save Changed Objects" backup is run nightly, and is a safe alternative, it is far from ideal. Proper protection of the City's time and attendance and payroll data requires a new tape drive.

3. With an i820 (current system), customers are required to own 150 user licenses before they are automatically converted into an unlimited group license. Since the city only owns 125 user licenses, IBM recently issued an out-of-compliance notice. The i520 (proposed system) only requires 100 user licenses before the automatic conversion to an unlimited group license. Therefore, the purchase of a 520 and subsequent transfer of the 125 user licenses to that i520 will close the compliance issue (at no additional cost to the city for Client Access software).
4. The Chicago Police Department mandated that all sworn personnel use the Chicago Automated Time and Attendance (CATA) system to record attendance. The present I series has surpassed licensed interactive users and does not have the ability to accommodate additional editors.

Process for soliciting quotations

IBM provided the names of five companies that could provide the goods and services. An email (on 6/29/06) was sent to each vendor with a specification of goods and services needed. The vendors were given until July 10, 2006 to respond with a bid. A committee reviewed the quotations and selected a vendor.

Firms Solicited

411 Solutions International
IBM
Optimus Solutions
Mainline Information Systems
Sirius Computer Solutions

Preferred Vendor

411 Solutions International

Justification for Preferred Vendor

411 Solutions International offered the lowest price, has the technical ability to install hardware and software and is certified MBE/WBE enterprise.
