

City of Chicago Urban Tree Planting List

List Premises:

- This list is not intended to be exhaustive but identifies urban tolerant trees, suitable for hardiness zones 5 and 6, and planted within the City of Chicago.
- Whenever possible, trees should be grown within 200 miles of their planting location.
- Trees may be planted as bare-root, balled & burlapped (B&B), grow bag or container grown.
- Parkway and sidewalk cut out trees should have a single central stem and be in tree form.
- Tree selection should follow the Chicago Bureau of Forestry's Guidelines for Tree Diversity.

List Key:

<u>City Parkway</u>	The city parkway refers to a predominantly continuous soil planting area within the public right-of-way, typically greater than 4' wide and adjacent to the curb line of a street.
<u>Sidewalk Cut-out</u>	A sidewalk cut-out refers to an opening in a sidewalk completely surrounded by concrete, asphalt, or pavers. This category also identifies trees better suited to parkways on arterial streets, narrow parkways (less than 4' wide), and other restricted size planting sites.
<u>Median</u>	Median trees are in landscape medians, traffic circles or other planters in the center of the roadway.
<u>Private Property</u>	Private property includes residential, corporate, parks, golf courses, cemeteries, or any other landscaped planting site not within the public right-of-way.
<u>Under Wires</u>	Smaller trees better suited for planting under utility wires.
<u>Salt Tolerant</u>	Salt tolerant trees are recommended for use in areas which are subject to road salt.
<u>Spring Planting Best</u>	Trees which may require spring planting or at least to be nursery dug in the spring to improve establishment and survivability rates.
<u>Promotes Diversity</u>	Tree Species or Species varieties occurring less frequently within Chicago.
<u>Availability</u>	
	GD = Good: commonly available in most nurseries
	AV = Average: available in many nurseries
	LTD = Limited: available in some nurseries in limited quantities or sizes
	VLTD = Very Limited: somewhat difficult to find in nurseries
	NA = Not Available: currently no known growers
<u>Hardiness</u>	
	EX = Excellent: good overall survivability
	GD = Good: performs well
	AV = Average: grows within the area

AV-PR=	Average to Poor: may grow within protected sites but otherwise not survive in exposed sites.
Ease of Transplant	
GD =	Good: Easily transplantable
AV =	Average: Transplants reasonably well
DIF=	Difficult: Requires special consideration for successful transplant
