Subject: Block Southside Recycling's Permit

[Warning: External email]

Hello,

My name is Lamia Calliari and I have been a resident of the city of Chicago for 9 years and **I strongly urge the city to block Southside Recycling's permit to open a new facility in the 10th Ward.**

While operating in Lincoln Park, General Iron racked up numerous violations and tens of thousands of dollars in fines. The planned Burley Avenue site is a half-mile from George Washington elementary and high schools in East Side. This neighborhood is 80 percent Latino and the 10th Ward already suffers under a disproportionate burden from industrial operations that cause air and soil pollution, traffic congestion and noise.

I implore the city to protect the health of the children and neighbors of the 10th Ward. They deserve the same protection as any Lincoln Park child or neighbor. Let us begin this new year with hope for environmental progress.

Thank you,
Lamia Calliari

Subject: Stop the General Iron Permit

[Warning: External email]

Dear City of Chicago Environmental Comments,

Dear Mayor Lightfoot and administration:

This city and its elected officials have a duty to protect all Chicagoans to the best of their extent. In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must not allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Michelle Jorgensen

Subject: Stop the General Iron Permit

[Warning: External email]

Dear City of Chicago Environmental Comments,

Dear Mayor Lightfoot and administration:

This city and its elected officials have a duty to protect all Chicagoans to the best of their extent. In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must not allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Kayla Baum

We are not required to house industries that contaminate public health and worsen environmental pollution.

Additionally as a resident of Pilsen which had the Fisk power plant which was closed due effect on residents breathing, and increased cases of asthma and based on studies from a 2002 Harvard public health study on pollution on surrounding neighborhoods it feels disingenuous to repeat the same mistake with General Iron. No one should have their lives compromised by pollution especially given the long term affects it will have on the lives around the facility.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Chris Diers

Subject: An Urgent Cry to Stop the Last General Iron Permit

[Warning: External email]

Dear City of Chicago Environmental Comments,

Dear Mayor Lightfoot and administration:

It is your duty to protect all Chicagoans to the best of your ability. I ask that you please pause and listen to the cries of those Chicagoans in this crucial time before approving the final permit for General Iron.

In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must NOT allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I know that City Hall is currently deciding whether to approve one of the final permits that will allow this metal shredder to move to the Southeast Side. I ask that you please consider the ramifications of your actions (whether they be explosions, worsened respiratory illnesses, or more). These communities deserve better from us. Please do your job and protect them.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Trinity Lee

Dear City of Chicago Environmental Comments,

Dear Mayor Lightfoot and administration:

This city and its elected officials have a duty to protect all Chicagoans to the best of their extent. In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must not allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Jia Huang

Subject: RMG Facility

[Warning: External email]

To Whom It May Concern:

I am a Cook County resident commenting on the proposed building of an RMG facility on the Southeast side of Chicago. Every community deserves clean air and soil. Pollution is already a large concern for the residents of the Southeast side, and RMG's facility would only intensify the issue. In the virtual 10th Ward Public Hearing, held on December 10th, many residents expressed concern related to the effects the facility would have on the community's health. Among them was Kate Koval, who voiced her worry regarding manganese, lead, and all particulate matter. She stressed the detrimental impact that breathing in particulate matter would have on children, who are still developing. These effects include asthma, lung cancer, and many others. In addition, a resident who spoke at the [July 25th](#) town hall pointed out that her yard already has twelve times the lead concentration deemed safe by the EPA. The 10th Ward clearly does not need any more pollutants threatening their population. These are just a small number of the many health concerns raised by Southeast side residents. Allowing RMG to construct a recycling facility on the Southeast side would further damage the soil and air quality, and could lead to a multitude of health issues. I am asking you to please consider denying RMG the final permit at this location for the sake of the nearby population's health.

Thank you for your time.

Sincerely,
K. Stabb

Subject: Stop the General Iron Permit

[Warning: External email]

Dear City of Chicago Environmental Comments,

Dear Mayor Lightfoot and administration:

This city and its elected officials have a duty to protect all Chicagoans to the best of their extent. In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must not allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Supriya K

In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must not allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

miss girl

In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Pamela Rosinia

[Warning: External email]

Dear City of Chicago Environmental Comments,

Dear Mayor Lightfoot and administration:

This city and its elected officials have a duty to protect all Chicagoans to the best of their extent. In the midst of a public health crisis and in light of the history of environmental racism on the Southeast Side of Chicago, this administration must not allow General Iron to move their operations to the 10th ward.

A repeated offender of state and federal environmental regulations, General Iron has proven itself to be a bad neighbor in Lincoln Park. They had an explosion at their Lincoln Park facility a few months ago, and residents of Lincoln Park have complained about fragments from the demolition entering their homes and worsening their public health.

A move to the southeast side will not change their behavior or fix this problem — that will only make it someone else's — a community that already struggles with the legacy of environmental and public health contamination. In fact, the proposed site will be 100 yards away from a school in the neighborhood, which is completely unacceptable.

The communities on the southeast side are already disproportionately burdened by air pollution and COVID-19. We cannot ask them to take on more risk to their lives and livelihood. General Iron should not be permitted to operate on the Southeast Side of Chicago, nor should it anywhere else within the borders of the city. We are not required to house industries that contaminate public health and worsen environmental pollution.

I urge you to deny the permits for General Iron to move to the southeast side of Chicago.

Sincerely,

Courtney Cech
