What is the risk?
Currently, the risk of influenza infection is low. Vaccination is the best way to protect against influenza infection and all Chicagoans aged six months and older are encouraged to get vaccinated. Chicagoans should ask their healthcare provider or pharmacist about vaccine availability. For those without a healthcare provider or whose healthcare providers do not have the influenza vaccine, a schedule of City of Chicago influenza vaccine clinics 1 is available on the City website and by calling 311. To locate the closest City of Chicago clinic or retail pharmacy, go to www.chicagoflushots.org. On Saturday, November 15, CDPH will be offering influenza vaccines at Truman College located at 1145 West Wilson Avenue from 9AM until 2PM.

Are severe cases of influenza occurring?
The Illinois Department of Public Health (IDPH) has issued influenza testing and reporting guidelines 2. Suspected novel and variant influenza, pediatric influenza-associated deaths, influenza-associated ICU hospitalizations and outbreaks of influenza-like illness in a congregate setting should all be reported to CDPH via IN-EDSS 3. For the week of November 2-8, 2014, two influenza-associated ICU hospitalizations were reported; both were positive for influenza A (1 H3N2 and 1 unknown subtype [subtyping not attempted or not all subtypes tested]).

Since September 28, 2014, three influenza-associated ICU hospitalizations have been reported (Figure 1). Among the total ICU hospitalizations reported 2 were positive for influenza A (1 H3N2 and 1 unknown subtype) and 1 was positive for influenza B.

How much influenza-like illness is occurring?
CDPH receives data from over 60 surveillance sites across Chicago, which report the total number of patient visits seen weekly, and of those visits, the number with influenza-like illness (ILI) (i.e., fever of 100°F or greater, with cough or sore throat). All hospitals in Chicago that provide emergent care are required to report on a weekly basis the total number of emergency department visits, and of those visits, the number with ILI. For the week of November 2-8, 2014 (week 45), with 14 hospitals reporting, 2.9% of emergency department visits were due to ILI (Figure 2).

ESSENCE is an electronic syndromic surveillance system that utilizes emergency department chief complaint data submitted daily by participating Chicago hospitals. ILI activity is determined solely based on the patient’s chief complaint and does not take into account the entire medical record, as the ILI activity reported in Figure 2 does.

Currently, 10 Chicago hospitals submit data to ESSENCE. For the week of November 2-8, 2014, <1% of emergency department visits were due to ILI (Figure 3). Several outpatient clinics and hospital emergency departments throughout Chicago participate in CDC’s Influenza-like Illness Surveillance Network (ILINet) by reporting on the

number of patients with ILI seen weekly. From November 2-8, 2014, with 48 facilities reporting, 2.9% of visits were due to influenza-like illness (Figure 4).

**Which influenza strains are circulating?**
Data on influenza virus test results are reported by Chicago laboratories performing influenza subtyping. For the week of November 2-8, 2014, with 6 laboratories reporting, 2 of the 343 (<1%) specimens tested for influenza were positive. Among this week’s positive specimens, all were typed as influenza A (1 H3N2 and 1 unknown subtype). Since September 28, 2014, 13 of 2,027 (1%) specimens tested for influenza have been positive; 5 typed as influenza A (4 H3N2 and 1 unknown subtype) and 8 were typed as influenza B. (Figure 5). The graphs below show the proportion of influenza subtypes for the past four influenza seasons based on laboratory surveillance.

**Where can I get more information?**
The Centers for Disease Control and Prevention’s FluView⁴ report provides national updates and trends related to the intensity of influenza activity across the United States, as well as detailed information on antiviral resistance, severity of illness, and other topics. Updates specific to Illinois⁵ and Suburban Cook County⁶ are also available online. Current and archived issues of the Chicago Flu Update can be found on the CDPH website section Current Flu Situation in Chicago⁷. In 2013, the Metropolitan Chicago Healthcare Council (MCHC) and CDPH released “Stop the Spread: A Health Care Guide to Influenza Preparedness”⁸. This report provides an overview of influenza, it’s impact on public health and how hospitals can prepare for, mitigate the impact of and respond to influenza infections and outbreaks.
