West Nile Virus

June 17, 2013

Surveillance

This is the second week of mosquito surveillance. Mosquitoes were collected from a total of 71 gravid traps on two consecutive days then tested in-house for West Nile virus.

Mosquitoes:

Week 24 (06/10/13 –06/14/13)	
Total Collections (Number of Traps X Frequency of Collection)	142
Number of Female <i>Culex</i> Trapped and Tested	1670
Number of Pools Tested	121
Number of Pools Positive	0
Number of Community Areas with Positive Mosquitoes Pools	0
Cumulative Totals	
Total Collections (Number of Traps X Frequency of Collection)	284
Number of Female <i>Culex</i> Trapped and Tested	2030
Number of Pools Tested	198
Number of Pools Positive	0
Number of Community Areas with Positive Mosquitoes Pools	0

Community Areas: No community areas with WNV-positive mosquitoes.

Dead birds: Four birds were collected. Results are pending on all four.

Humans: None reported

Risk Assessment

The risk of West Nile virus infection continues to be low.

Larval and Adult Mosquito Control Efforts

No larvaciding or adulticiding efforts.
