Arboviral Surveillance Report
August 4\textsuperscript{th}, 2020

Surveillance
This report provides data on Week 31 of surveillance for West Nile virus (WNV) in mosquitoes and includes data on other surveillance indicators. Gravid and BG Sentinel traps are placed throughout the City of Chicago and monitored twice a week for the duration of the mosquito-breeding season. For this reporting period, there were thirteen (13) WNV positive mosquito pools from eleven (11) traps within the City.

Mosquitoes (data from 82 traps)

\begin{tabular}{|l|c|}
\hline
Week 31 (7/27/20 – 8/2/20) & \\
\hline
Total Collections (Number of Traps X Frequency of Collection) & 156 \\
Number of Female \textit{Culex} Trapped and Tested & 2476 \\
Number of Pools Tested & 136 \\
Number of Pools Positive & 13 \\
Number of Community Areas with Positive Mosquito Pools & 11 \\
\hline
Cumulative Totals & \\
\hline
Total Collections (Number of Traps X Frequency of Collection) & 1225 \\
Number of Female \textit{Culex} Trapped and Tested & 10,354 \\
Number of Pools Tested & 939 \\
Number of Pools Positive & 18 \\
Number of Community Areas with Positive Mosquito Pools & 13 \\
\hline
\end{tabular}

Community Areas with Positive Mosquito Pools (cumulative):
East Garfield Park, O'Hare, Dunning, Riverdale, Austin, South Lawndale, Archer Heights, Garfield Ridge, Englewood, New City, Greater Grand Crossing, Chatham and South Deering.

Dead Birds: 1  
\textbf{Aedes albopictus (cumulative):} 229 females and 72 males  
\textbf{Humans:} 0
Risk Assessment
The risk of human West Nile virus infection in the City of Chicago is moderate.

Larval and Adult Mosquito Control Efforts
Surveillance crews are monitoring catch basins throughout the City to assess the level of control. Currently, there are no plans to perform additional larvicide applications or truck-based ULV adulticide applications within the City.
