CHICAGO DEPARTMENT OF PUBLIC HEALTH STI SPECIALTY CLINICS REPORT (2017-2021)

Clinics Summary and Data Highlights

The Chicago Department of Public Health (CDPH) is the municipal public health protection agency serving the residents of the city of Chicago, with a population of 2,695,555 residents. At present, the CDPH Syndemic Infectious Disease (SID) Bureau operates three sexually transmitted infection (STI) specialty clinics located throughout the city, serving the needs of Chicago's diverse communities:

- Lakeview Specialty Clinic
- Roseland Specialty Clinic
- South Austin Specialty Clinic

CDPH STI specialty clinics serve a large and varied clientele, including racial and sexual minorities. CDPH clinics provide confidential HIV/STI testing, STI treatment, linkage to HIV care and HIV pre-exposure prophylaxis (PrEP), and vaccination for mpox, COVID, and influenza. CDPH is committed to ensuring all residents, including partner organizations and providers, have access to information and data regarding our work, programs, and the health status of our residents and their communities.

DISEASE BUREAU**

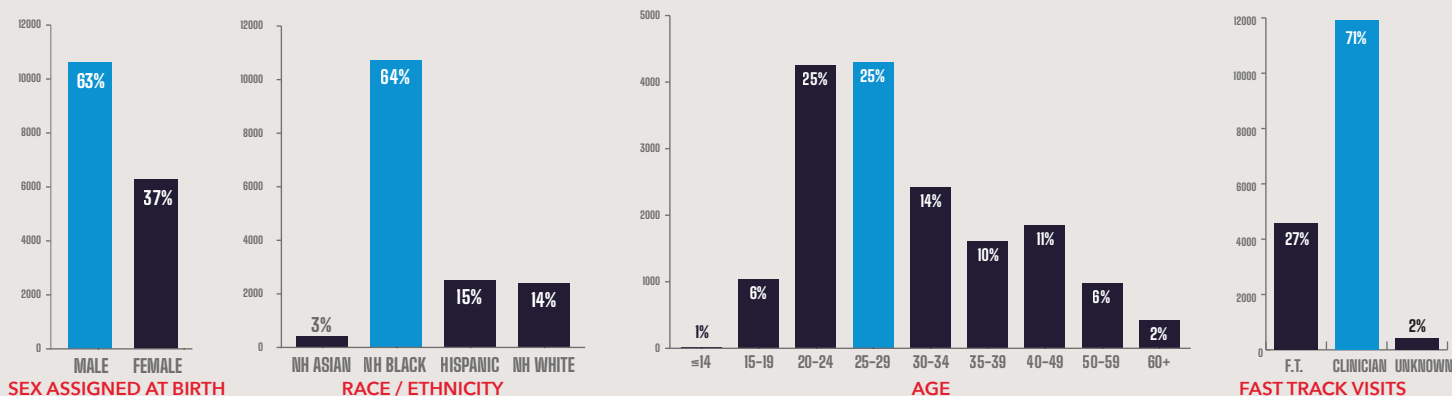

2017

DATA HIGHLIGHTS FOR YEARLY POPULATION DEMOGRAPHICS AND HIV/STI TESTING

In 2017, 16,895 unique patients were seen across all clinics, with 10,607 (63%) assigned male sex at birth and 6,271 (37%) assigned female sex at birth. Forty percent (40%) of clients identified as heterosexual males while nine percent (9%) of clients identified as gay, bisexual, and other men who have sex with men (MSM) across all clinics. Nearly two-thirds (64%) identified as non-Hispanic Black, followed by Hispanic (15%), and non-Hispanic White (14%). Half of patients were between the ages of 20 and 29 years old (50%). Most patients (71%) received a full clinical visit as compared to 27% of patients seen via Fast Track, or an express visit for asymptomatic STI screening.

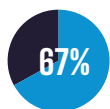

OVERALL CLINICS DEMOGRAPHICS

Note: Groups may not total 100% due to missing values. Total cases does not include cases with unknown sex, age, and race/ethnicity.

There were 2,103 positive **CHLAMYDIA TRACHOMATIS** infections of the 20,902 tests performed

SEX AT BIRTH

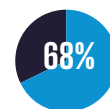

of chlamydia cases were **assigned male sex at birth**

AGE

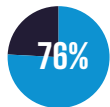

the largest proportion of chlamydia cases was among **20-24 year olds**

RACE/ETHNICITY

of chlamydia cases identified as **non-Hispanic Black**

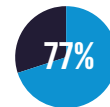

There were 1,415 positive **NEISSERIA GONORRHOEAE** infections of the 20,899 tests performed

of gonorrhea cases were **assigned male sex at birth**

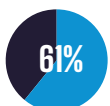

the largest proportion of gonorrhea cases was among **20-24 year olds**

of gonorrhea cases identified as **non-Hispanic Black**

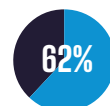

There were 43 positive **HUMAN IMMUNODEFICIENCY VIRUS** infections of the 14,294 confirmatory tests performed

of those who completed an HIV test were **assigned male sex at birth**

the largest proportion of those who completed an HIV test was among **25-29 year olds**

of those who completed an HIV test identified as **non-Hispanic Black**

In 2017, HIV Ab/Ag, 5th generation confirmatory test was used for processing at the reference laboratory.

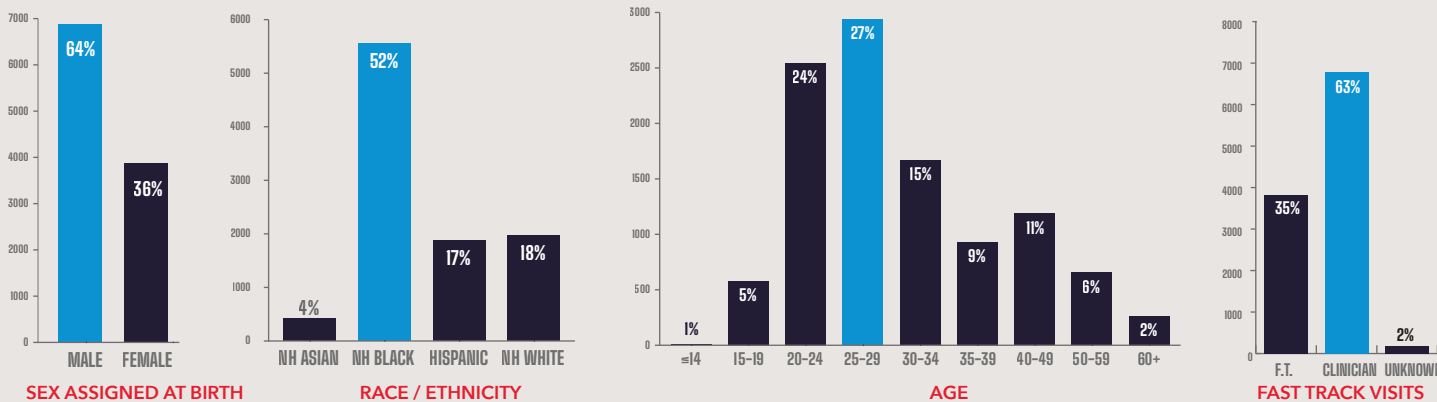

2018

DATA HIGHLIGHTS FOR YEARLY POPULATION DEMOGRAPHICS AND HIV/STI TESTING

In 2018, 10,769 unique patients were seen annually. Among clients seen, 64% were assigned male sex at birth and 36% were assigned female sex at birth. One-third of clients identified as heterosexual males (37%) and 8% identified as MSM across all clinics. Over half of all clients identified as non-Hispanic Black (52%), followed by non-Hispanic white (18%), and Hispanic (17%). In relation to age, the greatest proportion of clients was 25-29 year olds (27%), followed closely by 20-24 year olds (24%). The proportion of patients seen via Fast Track (35%) increased from the previous year.

Both the Englewood Specialty Clinic and West Town Specialty Clinic closed permanently in 2018.

OVERALL CLINICS DEMOGRAPHICS

Note: Groups may not total 100% due to missing values. Total cases does not include cases with unknown sex, age, and race/ethnicity.

There were 1,242 positive **CHLAMYDIA TRACHOMATIS** infections of the 13,390 tests performed

SEX AT BIRTH

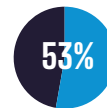

of chlamydia cases were **assigned male sex at birth**

AGE

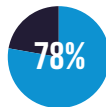

the largest proportion of chlamydia cases was among **20-24 year olds**

RACE/ETHNICITY

of chlamydia cases identified as **non-Hispanic Black**

There were 722 positive **NEISSERIA GONORRHOEAE** infections of the 13,384 tests performed

of gonorrhea cases were **assigned male sex at birth**

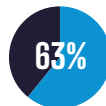

the largest proportion of gonorrhea cases was among **25-29 year olds**

of gonorrhea cases identified as **non-Hispanic Black**

There were 53 positive **HUMAN IMMUNODEFICIENCY VIRUS** infections of the 9,845 confirmatory tests performed

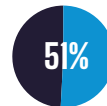

In 2018, HIV Ab/Ag, 5th generation confirmatory test was used for processing at the reference laboratory.

of those who completed an HIV test were **assigned male sex at birth**

the largest proportion of those who completed an HIV test was among **25-29 year olds**

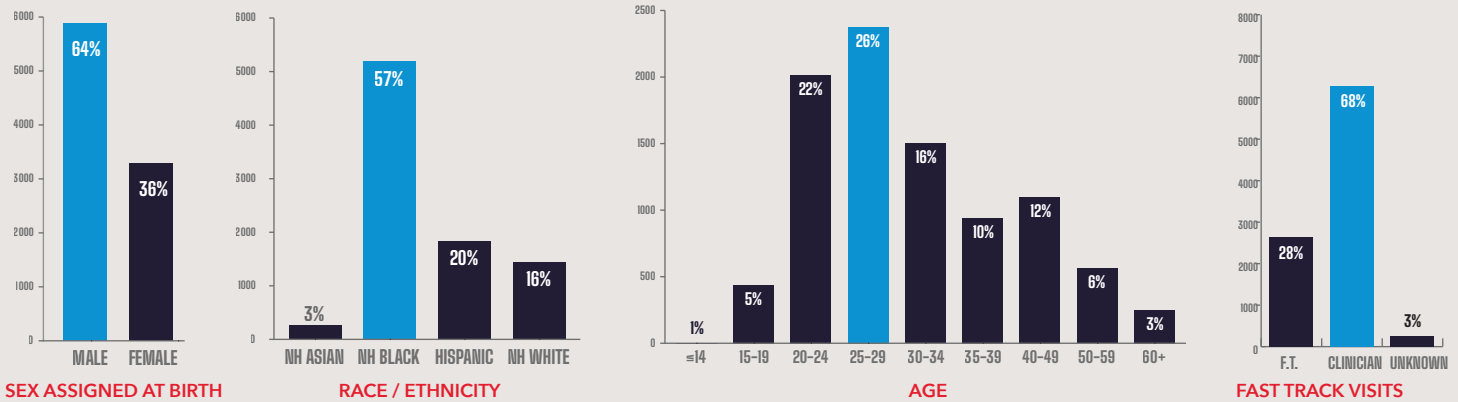

of those who completed an HIV test identified as **non-Hispanic Black**

2019

DATA HIGHLIGHTS FOR YEARLY POPULATION DEMOGRAPHICS AND HIV/STI TESTING

In 2019, 9,183 unique patients were seen annually. Two-thirds (64%) were assigned male sex at birth and 36% were assigned female sex at birth. Less than one-third (30%) identified as heterosexual males and 6% identified as MSM, a decrease from 2018. Most (57%) identified as non-Hispanic Black, followed by Hispanic (20%), and non-Hispanic White (16%). Nearly half of all clients were aged 20-29 years old (48%). The proportion of clients seen via Fast Track visits (28%) decreased from 2018.

OVERALL CLINICS DEMOGRAPHICS

Note: Groups may not total 100% due to missing values. Total cases does not include cases with unknown sex, age, and race/ethnicity.

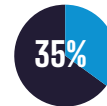

There were 1,032 positive **CHLAMYDIA TRACHOMATIS** infections of the 11,892 tests performed

SEX AT BIRTH

of chlamydia cases were **assigned male sex at birth**

AGE

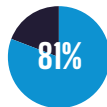

the largest proportion of chlamydia cases was among **20-24 year olds**

RACE/ETHNICITY

of chlamydia cases identified as **non-Hispanic Black**

There were 609 positive **NEISSERIA GONORRHOEAE** infections of the 11,790 tests performed

of gonorrhea cases were **assigned male sex at birth**

the largest proportion of gonorrhea cases was among **25-29 year olds**

of gonorrhea cases identified as **non-Hispanic Black**

There were 38 positive **HUMAN IMMUNODEFICIENCY VIRUS** infections of the 6,142 confirmatory tests performed

In 2019, HIV Ab/Ag, 5th generation confirmatory test was used for processing at the reference laboratory.

of those who completed an HIV test were **assigned male sex at birth**

the largest proportion of those who completed an HIV test was among **25-29 year olds**

of those who completed an HIV test identified as **non-Hispanic Black**

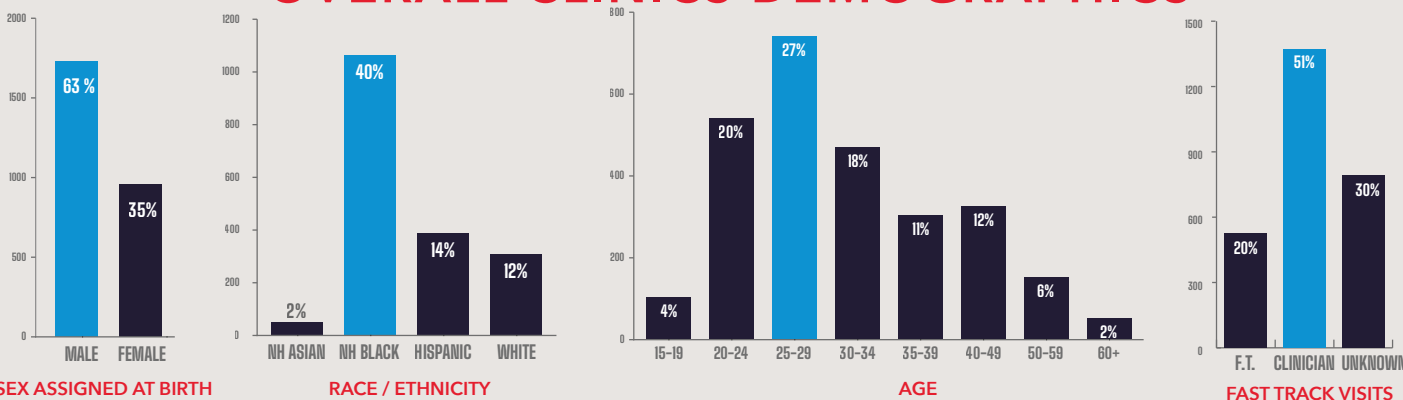

2020

DATA HIGHLIGHTS FOR YEARLY POPULATION DEMOGRAPHICS AND HIV/STI TESTING

Of the 2,690 unique patients seen in 2020, 63% were assigned male sex at birth and 35% were assigned female sex at birth. Nearly half (46%) of all clients identified as heterosexual males and 8% identified as MSM across all clinics. The largest proportion of clients seen identified as non-Hispanic Black (40%), followed by Hispanic (14%), and non-Hispanic White (12%). Over one quarter (27%) were 25-29 years old. One-fifth (20%) of patients were seen via Fast Track.

Caution should be taken when comparing 2020 and 2021 data to previous years. Preventive measures to reduce the spread of COVID-19 were implemented in March 2020 and resulted in clinic closures and/or reduced hours of operation, reducing the number of STI tests conducted.

OVERALL CLINICS DEMOGRAPHICS

Note: Groups may not total 100% due to missing values. Total cases does not include cases with unknown sex, age, and race/ethnicity.

There were 280 positive **CHLAMYDIA TRACHOMATIS** infections of the 927 tests performed

SEX AT BIRTH

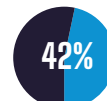

of chlamydia cases were **assigned male sex at birth**

AGE

the largest proportion of chlamydia cases was among **25-29 year olds**

RACE/ETHNICITY

of chlamydia cases identified as **non-Hispanic Black**

There were 137 positive **NEISSERIA GONORRHOEAE** infections of the 815 tests performed

of gonorrhea cases were **assigned male sex at birth**

the largest proportion of gonorrhea cases was among **20-24 year olds**

of gonorrhea cases identified as **non-Hispanic Black**

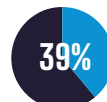

There were 3 positive **HUMAN IMMUNODEFICIENCY VIRUS** infections of the 14 confirmatory tests performed

of those who completed an HIV test were **assigned male sex at birth**

the largest proportion of those who completed an HIV test was among **20-24 year olds**

of those who completed an HIV test identified as **non-Hispanic Black**

In 2020, the confirmatory test performed and processing changed. Only positive or indeterminate rapid tests were sent to the reference laboratory and processed with HIV antibody/antigen screen with reflex.

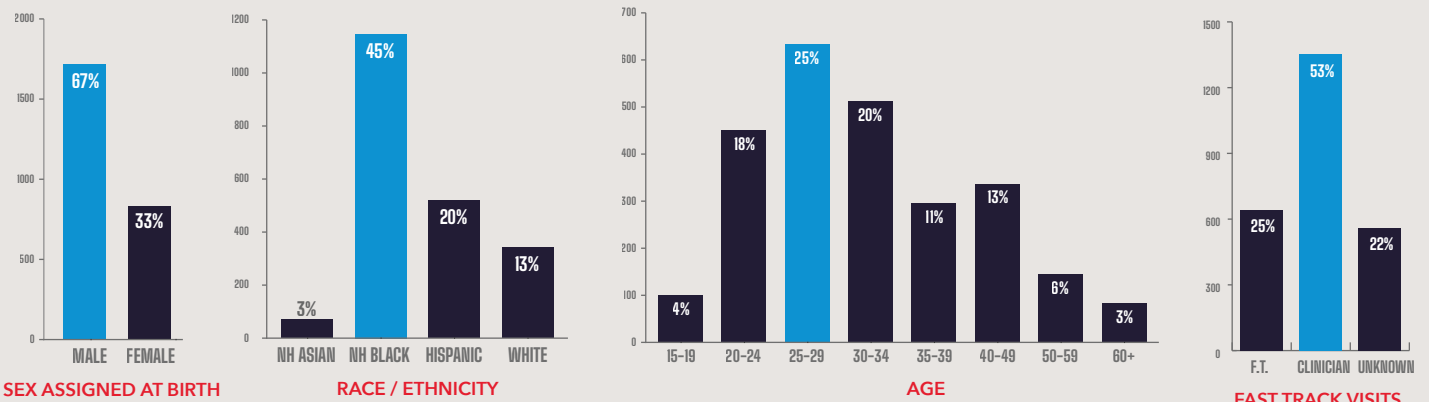

2021

DATA HIGHLIGHTS FOR YEARLY POPULATION DEMOGRAPHICS AND HIV/STI TESTING

Of the 2,556 unique patients seen in 2021, 67% were assigned male sex at birth and 33% were assigned female sex at birth. Forty-five percent of clients identified as heterosexual males and 11% identified as MSM, the greatest proportion over the 5-year period. Forty-five percent of clients identified as non-Hispanic Black and one-fifth (20%) identified as Hispanic, and 13% identified as non-Hispanic white. One quarter (25%) were 25-29 years old, and one-fifth (20%) were 30-34 years old. One quarter (25%) of clients were seen via Fast Track.

Caution should be taken when comparing 2020 and 2021 data to previous years. Preventive measures to reduce the spread of COVID-19 were implemented in March 2020 and resulted in clinic closures and/or reduced hours of operation, reducing the number of STI tests conducted.

OVERALL CLINICS DEMOGRAPHICS

Note: Groups may not total 100% due to missing values. Total cases does not include cases with unknown sex, age, and race/ethnicity.

There were 218 positive **CHLAMYDIA TRACHOMATIS** infections of the 2,548 tests performed

SEX AT BIRTH

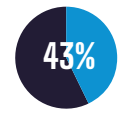

of chlamydia cases were **assigned male sex at birth**

AGE

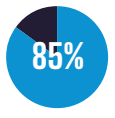

the largest proportion of chlamydia cases was among **20-24 year olds**

RACE/ETHNICITY

of chlamydia cases identified as **non-Hispanic Black**

There were 126 positive **NEISSERIA GONORRHOEAE** infections of the 2,548 tests performed

of gonorrhea cases were **assigned male sex at birth**

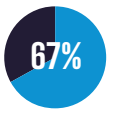

the largest proportion of gonorrhea cases was among **25-29 year olds**

of gonorrhea cases identified as **non-Hispanic Black**

There were 4 positive **HUMAN IMMUNODEFICIENCY VIRUS** infections of the 79 confirmatory tests performed

of those who completed an HIV test were **assigned male sex at birth**

the largest proportion of those who completed an HIV test was among **20-24 year olds**

of those who completed an HIV test identified as **non-Hispanic Black**

In 2020, the confirmatory test performed and processing changed. Only specimens from individuals with positive or indeterminate rapid tests were sent to reference laboratory and processed with HIV antibody/antigen with reflex.

APPENDX

Sexually Transmitted Infection Fact Sheet

Gonorrhea

Neisseria gonorrhoea is a bacterial sexually transmitted infection (STI) and varies in course, severity, and symptoms among males and females. If left untreated, disease sequelae can include pelvic inflammatory disease (PID), ectopic pregnancy, and infertility. *N. gonorrhoea* has developed antibiotic resistance. Correspondingly, the CDC treatment guidelines were changed to recommend a dual therapy regimen with ceftriaxone and either azithromycin or doxycycline.

Chlamydia

Chlamydia trachomatis is the most reported notifiable disease in Chicago and the United States. Chlamydia infections in women are usually asymptomatic, however, can result in pelvic inflammatory disease (PID), which is a major cause of infertility, ectopic pregnancy, and chronic pelvic pain. In addition, pregnant women infected with chlamydia can pass the infection to their infants during delivery, potentially resulting in neonatal ophthalmia or pneumonia. Due to the large burden of disease and risk associated with *C. trachomatis* infection, CDC recommends that all sexually active women younger than age 26 years receive annual chlamydia screening.

HIV

Human immunodeficiency virus (HIV) is a sexually transmitted infection that attacks the body's immune system. HIV can be transmitted through sexual contact, sharing needles to inject drugs, during pregnancy, birth, or breast feeding. After infection, HIV may present as flu-like symptoms within 2-4 weeks, or an individual may be asymptomatic. If left untreated, HIV may progress to acquired immunodeficiency syndrome (AIDS), resulting in an increasing number of opportunistic infections or other serious illnesses and potentially mortality. CDC recommends condom use, avoiding needle sharing when injecting drugs, inquiring about pre-exposure prophylaxis (PrEP) with your provider if you engage in behaviors that increase your risk for acquiring HIV, as well as getting tested for HIV if at risk.

Pre-exposure Prophylaxis (PrEP) Fact Sheet

About PrEP

Pre-exposure prophylaxis, or PrEP, is a safe and highly effective medication that prevents the acquisition of HIV if an individual is exposed. PrEP is currently approved as a daily oral pill and as an intramuscular injection. When taken as prescribed, PrEP reduces the risk for acquiring HIV through sex by 99% and through injection drug use by at least 74%. PrEP is indicated for any individual who requests it, regardless of reported behaviors. PrEP does not prevent any other sexually transmitted infections and should not be initiated by anyone who already has a confirmed HIV diagnosis.

Approved PrEP Medications

PrEP is currently available as three FDA-approved drugs: Truvada (tenofovir disoproxil fumarate + emtricitabine fixed dose-combination, or TDF/FTC), Descovy (tenofovir alafenamide + emtricitabine fixed-dose combination, or TAF/FTC), and Apretude (cabotegravir long-acting injectable suspension, or CAB-LA). TDF/FTC and TAF/FTC are available in pill form whereas Apretude is administered via injection.

Side Effects and Rare Complications

PrEP is safe and generally well-tolerated. Users of PrEP report mild symptoms such as nausea, diarrhea, headache, and fatigue, but side effects usually resolve during the first month. Some users of CAB-LA also report pain and swelling at the injection site. Use of TDF/FTC has been associated with a decline in kidney function in some users. TAF/FTC use has been associated with slight weight gain and elevated cholesterol. Some users of CAB-LA have reported mood changes and increased depressive symptoms.

PrEP Initiation and Discontinuation

Current clinical guidelines recommend medical providers discuss PrEP with all sexually active patients. Patients who initiate PrEP must first speak to a medical provider to receive patient education and adherence counseling as well as to ensure no medical contraindications. Clinical practice guidelines indicate that PrEP providers deliver two forms of HIV testing before providing PrEP as well as Hepatitis B serological testing. Estimated creatinine clearance (eCrCl), syphilis, chlamydia, and gonorrhea testing are also recommended during PrEP initiation. PrEP can safely be discontinued at any time, but patients should receive final HIV testing and eCrCl should be measured (TDF/FTC only).

PrEP Follow-up

PrEP providers should require follow-up visits every 3 months to check HIV status and drug tolerance. Providers should monitor eCrCl for patients taking TDF/FTC and cholesterol and triglycerides for patients taking TAF/FTC. Follow-up visits for PrEP can also be used as an opportunity to continue adherence counseling, sexual health education, and indicated STI screenings.

PrEP at CDPH

The Chicago Department of Public Health started offering PrEP at Lakeview Specialty Clinic by appointment beginning February 24, 2023. PrEP services were expanded to Roseland Specialty Clinic starting May 15, 2023 by appointment based on provider availability. Providers will dispense a 30-day supply of generic Truvada, after which patients will be referred to permanent PrEP providers.
