Chicago is the mayor of
environmental partnerships to do just
that. He has partnered with the City of
Chicago to work on stormwater and waste-
water infrastructure, as well as
energy projects to reduce energy usage.

The City of Chicago stands
tall among effective stormwater and
waste-water management efforts. By
installing green infrastructure, such
as rain gardens and permeable pavement,
the city is able to reduce runoff and
protect the environment.

The Great Lakes are
an economic asset to the region. With
over 7,000 miles of shoreline, the Great
Lakes provide a significant source of
income and jobs for residents.

The species listed in the
Great Lakes are facing threats from
economic development and 
industrial pollution. It is crucial to protect
these species and ensure their survival.
