Grantee: Chicago, IL

Grant: B-13-MS-17-0001

July 1, 2020 thru September 30, 2020 Performance

**Grant Number:** B-13-MS-17-0001

**Obligation Date:**

**Grant Name:** Chicago, IL

**Award Date:**

**Grant Award Amount:** $63,075,000.00

**Contract End Date:** Active

**LOCCS Authorized Amount:** $63,075,000.00

**Grant Status:** Active

**Estimated PI/RL Funds:** $0.00

**Total Budget:** $63,075,000.00

**Disasters:**

**Declaration Number**
FEMA-4116-IL

**Narratives**

**Disaster Damage:**

The storm system that swept through Chicago and surrounding suburbs on April 17-18, 2013 produced approximately 5.5 inches of rain, or the equivalent of a 10-year storm. The heavy rains experienced resulted in sewer overflows, basements floods, and backflow of water from the Chicago River into Lake Michigan. The excessive rainfall that entered the sewer system could not flow fast enough to a wastewater treatment plant or a combined sewer outfall. By early morning of April 18, before the largest rainfall, the Tunnel and Reservoir Plan (TARP) tunnels, also known as the deep tunnels, were filled, which resulted in combined sewer overflows at 132 separate outfall locations. To prevent overland flooding the Metropolitan Water Reclamation District of Greater Chicago (MWRD) and the Army Corp of Engineers opened the Chicago River controlling locks for nearly 23 hours, leading to a discharge of over 10.7 billion gallons into Lake Michigan.

However, the April storms produced such heavy rains that the combined sewers overflowed and released untreated waste and stormwater. As sewer water rose above drain openings that were below street grade, water backed up into homes and other buildings. Basement flooding occurred citywide, with the City receiving over 2,500 water-in-basement calls and over 800 water-in-streets calls from residents from all 50 wards.

The flooding also significantly impacted Chicago's infrastructure and resulted in the City receiving 571 calls of flooded streets and 32 calls of flooded viaducts. The Department of Streets and Sanitation relocated 105 vehicles to remove them from flooded areas. The Chicago Transit Authority received calls regarding flooded train stations. The rain and related flooding caused major road closures, including the following interstate highways and major city thoroughfares: I-94 northbound at the Kennedy Junction; I-94 southbound at Dempster Avenue; I-94 northbound between Foster and Touhy; I-94 northbound at 130th Street; Bishop Ford Expressway experienced major backups with lanes closures; 96thand Dorchester due to a sinkhole; Midway Plaisance eastbound; Belmont Avenue ramp to northbound Lake Shore Drive; Viaducts on Stoney Island, 95th Street and Cottage Grove Avenue.

**Recovery Needs:**

To aid in recovery efforts of community areas that were most impacted by the storms, the City has committed the majority of CDBG-DR funding toward public way infrastructure restoration, specifically to the water, sewer and drainage system which will bring these areas to resilience. These funds will specifically address infrastructure limitations and underlying conditions that contribute to the flooding of residences.

The City committed the remainder to provide direct assistance to housing rehabilitation for homeowners and renters, as well as mitigation measures. This initiative will prioritize residents with FEMA-verified loss and documented unmet needs who are low- and moderate-income residents.

**Overall**

During Q3 2020, the City continued to make progress towards the implementation of its CDBG-DR funded projects. The Residential Flood Assistance Program (RFAP) is 100% complete and closed.

General landscaping and maintenance is complete at the Resiliency sites. Projects are in process of closing out.

The Albany Park Tunnel project is physically complete and completely paid out and closed. Of the projected 5,800 linear feet of improvements projected, 5,860 linear feet of tunnel was actually constructed.

No more Sewer Project activities completed closeout in Q3. The combined Project Total of pipeline constructed remains at 15,632 linear feet. Six Sewer Project Activities that have completed construction still remain in various stages of closeout with billing ongoing.

West 122nd Street between South Loomis Street to South Bishop Street

Activity Progress Narrative:

To improve storm water management, the City will construct green storm water infrastructure features on WPA streets to provide a location to store water, thus reducing flooding in the neighborhood. Based on the configuration of each street, the City will build an infiltration trench and/or a bioswale that will capture storm water. Infiltration trenches are located in the parking lane of the road and are designed to include permeable pavement that directs water into a gravel bed below the road surface. Bioswales are located in the parkway between the road and the sidewalk and use plants, trees, and a drainage bed of soil and gravel to capture and filter storm water runoff from the street. The City will also repave these streets so that the pitch of the road surface directs storm water runoff into the infiltration trench and bioswale.

Based on the configuration of each street, the City will build an infiltration trench and/or a bioswale that will capture storm water. Infiltration trenches are located in the parking lane of the road and are designed to include permeable pavement that directs water into a gravel bed below the road surface. Bioswales are located in the parkway between the road and the sidewalk and use plants, trees, and a drainage bed of soil and gravel to capture and filter storm water runoff from the street. The City will also repave these streets so that the pitch of the road surface directs storm water runoff into the infiltration trench and bioswale.

**Location Description:**
West 93rd Street between South Wentworth Avenue to South LaSalle Avenue

**Activity Description:**
To address the damage created by the April 2013 storms in the West Side Demonstration Area (WSDA), a series of concentrated stormwater landscapes will be constructed along selected corridors. These new landscapes will divert stormwater from the City’s combined sewer system and provide multiple community benefits to residents that are vulnerable to basement and street flooding.

**Location Description:**
The demonstration area is comprised of six West Side communities, Austin, Humboldt Park, East Garfield, West Garfield, North Lawndale and South Lawndale, referred to as the West Side Demonstration Area (WSDA). The specific locations will be identified through the environmental analysis process.

Activity Title: Resiliency Revitalization LMA E

Activity Type: Rehabilitation/reconstruction of a public improvement
Project Number: RD03-INFRASTRUCTURE - EXTENDED
Projected Start Date: 03/19/2018
Benefit Type: Low/Mod
National Objective: Area (Census)

Overall
Total Projected Budget from All Sources $635,086.39
Total Budget $0.00
Total Obligated $0.00
Total Funds Drawdown $0.00
Program Funds Drawdown $0.00
Program Income Drawdown $0.00
Program Income Received $0.00
Total Funds Expended $0.00
Most Impacted and Distressed Expended $0.00

To Date
Jul 1 thru Sep 30, 2020 $635,086.39
To Date $498,330.35

Responsible Organization: City of Chicago

Activity Description:
To address the damage created by the April 2013 storms in the West Side Demonstration Area (WSDA), a series of concentrated stormwater landscapes will be constructed along selected corridors. These new landscapes will divert stormwater from the City’s combined sewer system and provide multiple community benefits to residents that are vulnerable to basement and street flooding.

Location Description:
The demonstration area is comprised of six West Side communities, Austin, Humboldt Park, East Garfield, West Garfield, North Lawndale and South Lawndale, referred to as the West Side Demonstration Area (WSDA). The specific locations will be identified through the environmental analysis process.

Activity Progress Narrative:
Project is in process of closing out.
Section 3 Qualitative Efforts:

Accomplishments Performance Measures
No Accomplishments Performance Measures

Beneficiaries Performance Measures

To Jul 1 thru Sep 30, 2020: $1,106,449.26
To Date: $1,106,449.26

Activity Status: Under Way
Project Title: INFRASTRUCTURE
Projected End Date: 09/30/2022
Completed Activity Actual End Date: 09/30/2022
Responsible Organization: City of Chicago

Activity Description:
To improve storm water management, the City will construct green storm water infrastructure features on WPA streets to provide a location to store water, thus reducing flooding in the neighborhood. Based on the configuration of each street, the City will build an infiltration trench and/or a bioswale that will capture storm water. Infiltration trenches are located in the parking lane of the road and are designed to include permeable pavement that directs water into a gravel bed below the road surface. Bioswales are located in the parkway between the road and the sidewalk and use plants, trees, and a drainage bed of soil and gravel to capture and filter storm water runoff from the street. The City will also repave these streets so that the pitch of the road surface directs storm water runoff into the infiltration trench and bioswale.

Location Description:
East 88th Street between South Burley Avenue to South Mackinaw Avenue

Activity Progress Narrative:
Project is 90% complete.

Section 3 Qualitative Efforts:
