RE: Water Main Replacement Projects #1501203

Dear Neighbor,

In coordination with Mayor Rahm Emanuel’s “Building a New Chicago” infrastructure improvement program, and at Alderman Burke’s request, I would like to provide you with information about upcoming water and sewer construction projects in your neighborhood.

By late March 2016, Department of Water Management (DWM) and Benchmark Construction Company crews will begin to install 4,214 feet of new 8-inch water main in S. Archer Avenue, from 235 feet southwest of S. Drake Avenue to S. Kedzie Avenue, S. Drake Avenue, from S. Archer Avenue to W. 47th Street and S. Christiana Avenue, from S. Archer Avenue to W. 46th Street. The old water main dates back to 1910, and needs to be replaced.

After completion of the water main project, we will install a new sewer in S. Christiana Avenue, from S. Archer Avenue to W. 46th Street. Your ward will be notified prior to the commencement of the sewer main project.

If you would like to receive regular email updates about the progress of the projects, please go to www.BuildingANewChicago.org to register for the WaterALERT program. Simply enter your name, email address and the project identification numbers at the top of this letter.

By signing up for the WaterALERT emails, you will be notified as the project enters each new construction phase – from our mobilization of equipment onto the site, to the installation of new pipes, to the final restoration of the street.

When we are working in the street, we may close it to traffic for safety reasons, but you will always be able to reach your home or business. Outside of working hours, a travel lane will be left open for local traffic only.

We will post our work area for “No Parking” as needed during work hours (generally 7am-4pm). We are agreeable to parking outside of those hours, but cars will need to be moved by the start of the next workday. We will try to preserve as much parking as possible.

We know that construction always involves inconveniences and noise. We will do everything possible to maintain your quality of life throughout these projects, and conducting ourselves as good and thoughtful neighbors in the course of our presence on your street.

Should you have any questions or concerns, you can either ask the construction foreman during the project, or call any of the following numbers:

- 24-Hour Service and Information Line: 311
- 14th Ward Office: 773-471-1414
When we switch over the services from the old main to the new water main, we will interrupt water service. We give you 24-hour notice when this is to happen. However, in the event of an emergency shutdown during construction, we may not be able to give you prior warning.

**Flushing after Your Service Line has been Connected to the New Water Main**

Now that your old water main has been replaced and your water service has been connected to the new water main, it is important to flush your plumbing of any sediment, rust or metals, including any lead to maintain water quality.

Sediment, rust and metals, including any lead may collect in the aerator screen located at the tip of your faucets. These screens should be removed prior to flushing.

(1) Please find the closest available tap (an outside hose spigot, laundry sink faucet or bathtub) to where the water comes into the home that is not used for drinking water. Fully open the cold water tap and let the water run for at least 5 minutes. Next flush any other cold water faucets on that floor for at least 5 minutes.

(2) Move to the next highest floor and repeat.

(3) Move to additional floors in sequence and flush any taps or faucets for at least 5 minutes.

If you have any questions or concerns about your water quality, please call us at 312-744-8190 or call 311. For additional advice and information visit [http://www.epa.gov/il/advice-chicago-residents-about-lead-drinking-water](http://www.epa.gov/il/advice-chicago-residents-about-lead-drinking-water).

**Routine Flushing**

If your water line has been idle or stagnant for more than 6-hours, it is advised that you flush for at least 5 minutes to maintain water quality. This may include flushing the toilet, taking a shower and doing laundry.

**MeterSave**

Lastly, if you don’t already have one, I ask you to consider the installation of a water meter in your home to help you save money on your water bill. For more information on this free program, go to [www.metersave.org](http://www.metersave.org).

Thank you in advance for your patience and cooperation during this important infrastructure improvement project.

Sincerely,

Thomas H. Powers, P.E.
Commissioner
