

Department of Innovation and Technology

Jason DeHaan, Chief Information Officer
50 W. Washington Street, Suite 2700
Chicago, IL 60602
Phone: (312) 744-4795
Email: jason.dehaan@cityofchicago.org

Central Purpose

Enhance delivery of City services through easy, reliable, cost-effective and secure access to information and promote Chicago's advancement through technology.

Key Facts

The Department of Innovation and Technology (DoIT) is the central information technology organization for the City. DoIT provides a number of technology services to City departments, the Mayor's Office, Aldermen, sister agencies, residents, businesses and tourists.

Critical Programs/Services

- **City and Tourism and Websites** -- www.cityofchicago.org and www.explorechicago.org contain a vast network of information about City departments, services, events, and cultural amenities. The tourism website is marketed locally, nationally and internationally as a portal for visitors to see all of the great things Chicago has to offer as they plan their visits to the City. Chicagoans use the City's website to conduct a variety of transactions, including paying water bills, purchasing vehicle stickers, and applying for/checking the status of building permits. The City's website also includes thousands of city government records, including all contracts, payments, budget information, financial audits, and all information related to Tax Increment Financing (TIF). The City also launched an "Open Data" initiative to post City datasets in raw form, and all "Open Data" is available on the City's website.
- **Citywide Service Request System (CSR)** – used by the 311 City Services center. When a resident calls 311 or enters an online service request, CSR tracks the request through completion as it is assigned to various City departments. The system helps managers evaluate demand in order to allocate resources appropriately. It also provides performance information measuring how quickly services are completed.
- **Geographic Information Systems (GIS)** – allows the City to map hundreds of elements including zoning boundaries and changes, vehicle GPS data (Global Positioning System) and 311 service requests. The systems allow the City to monitor real-time and historic non-emergency dispatch operations, including snow removal. Using these systems, City departments can more efficiently route crews to assignments.
- **Enterprise Case Management (ECM)** – tracks social services provided to Chicagoans by the City, its sister agencies and its service providers.
- **Health Information Technology** – provides emergency health communications, helps track restaurant inspections, health records and billing.
- **Inspections and Permitting Initiative (IPI)** – tracks building and other permits, construction inspections, complaint inspections and annual inspections, which helps to ensure safe, sanitary, compliant buildings and businesses.
- **Revenue Systems** – provide cashing, business licensing, business inspections and taxes, water billing, debt referral and real-estate transfer tax tracking functions.
- **Financial Management and Purchasing System (FMPS) and Chicago Integrated**

Personnel and Payroll Systems (CHIPPS) – the City’s enterprise resource planning system that provides a central data repository for the City’s financial, human resource and payroll information.

- **Technical Operations** – maintenance of computers, servers, networks and telecommunications infrastructure including disaster recovery facilities for City employees including telephones, voicemail, electronic mail and other communication` tools.

Goals

- **Simplify IT** – make information easier to access and maintain.
- **Modernize IT** – keep access to information relevant, reliable and secure.
- **Rationalize IT** – keep IT cost-effective by centralizing where it makes sense.
- **Promote IT** – ensure residents and departments leverage information technology to its fullest potential.

Employees

Full Time Positions	Amount
	80

2011 Budget

Fund	Amount
Corporate Fund	\$20,563,865
Water Fund	\$4,880,664
ARRA BTOP Grant Funds*	\$17,624,000
Other Grant Fund*	\$2,752,963
TOTAL	\$45,821,497

* based on current projections

- **Enterprise Architecture** – development and maintenance of the City’s internal technology standards and policies.
- **IT Security and Data Management** – help City departments access and protect their data.
- **Project Management Office** – provide IT project management to key City projects to help assure on-time and on-budget delivery.
- **Technology Policy** – public-facing programs to expand access to digital infrastructure, increase technology adoption and deploy innovative applications in areas like health and education.

Grants
