

FORMER CARNOTITE REDUCTION COMPANY SITE REMEDIATION PROJECT

VISIT THE NEW AND IMPROVED WEBSITE LAYOUT! www.chicago.gov/carnotite

The City of Chicago's Department of Assets, Information & Services (AIS) has updated the website layout of the Former Carnotite Reduction Company Site Remediation Project (located at 434 E. 26th St.), which can be accessed at <http://www.chicago.gov/carnotite>. The new website allows easy access to the most current site information. The website provides a summary of ongoing activities, completed activities as well as upcoming activities at the Site. In addition, the website has a new tab where you can view up-to-date monitoring and sampling information; a map depicting the weekly remediation progress; and the Illinois Emergency Management Agency (IEMA)-approved project plans as this information becomes available. The new website also has a live video feed to watch ongoing site activities as they happen.

Update on Spring 2022 Site Activities:

In February or March, AIS's remediation contractor will begin pre-excavation activities at the site that may include:

- Installing dewatering wells to remove excess water during excavation
- Installing temporary power poles
- Installing pads for the wastewater treatment equipment
- Installing temporary haul roads

Some of these activities may be overlapped with active site remediation. The exact sequence of activities is subject to change. AIS's remediation oversight consultant will be onsite to monitor these activities.

For the Most Up-To-Date Information:

For the most current information about the site or the remediation project, please visit

<http://www.chicago.gov/carnotite>, email AIS_EHS_Notifications@cityofchicago.org, or call 312-744-0500.
