I. Executive Summary

This report summarizes the results of a traffic impact study conducted by Kenig, Lindgren, O’Hara, Aboona, Inc. (KLOA, Inc.) for a proposed warehouse/distribution development to be built in Chicago, Illinois. The objectives of the traffic study are as follows:

- Determine the existing vehicular, pedestrian, bicycle, and public transportation conditions in the study area to establish a base condition.
- Assess the impact that the proposed development will have on transportation conditions in the area.
- Determine any street, access, bicycle, and pedestrian modifications and/or improvements that will be necessary to effectively accommodate and mitigate future conditions.

Vehicle, pedestrian, and bicycle counts were conducted during the weekday morning and weekday evening peak periods at the intersections of Western Avenue with 45th Street and 47th Street, Western Boulevard with 45th Street and 47th Street, 43rd Street with Oakley Avenue, and 47th Street with Oakley Avenue in order to determine the general peak hour of traffic activity during these time periods.

As proposed, the site will be redeveloped with approximately 588,880 square feet of warehouse/distribution space in three buildings. Access to the site will be provided via 45th Street, Oakley Avenue, a proposed access drive on 47th Street that will replace an existing Wheatland Tube Company access drive, and a proposed access drive on Western Boulevard.

Based on the preceding analyses and recommendations, the following conclusions have been made:

- Area intersections have sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or traffic control modifications are required.
- The proposed access system will be adequate in accommodating the traffic estimated to be generated by the development.
- The proposed development will replace the Wheatland Tube Company which operates with a similar access system and generates truck traffic.

1. Introduction

This report summarizes the methodologies, results, and findings of a traffic impact study conducted by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA, Inc.) for a proposed warehouse/distribution development to be located in Chicago, Illinois. The site, which currently contains the Wheatland Tube Company, is located in the northeast quadrant of the intersection of Western Boulevard with 47th Street. As proposed, the site will be redeveloped with approximately 588,880 square feet of warehouse/distribution space in three buildings. Access to the site will be provided via 45th Street, 47th Street, Western Boulevard, Western Avenue and Oakley Avenue.

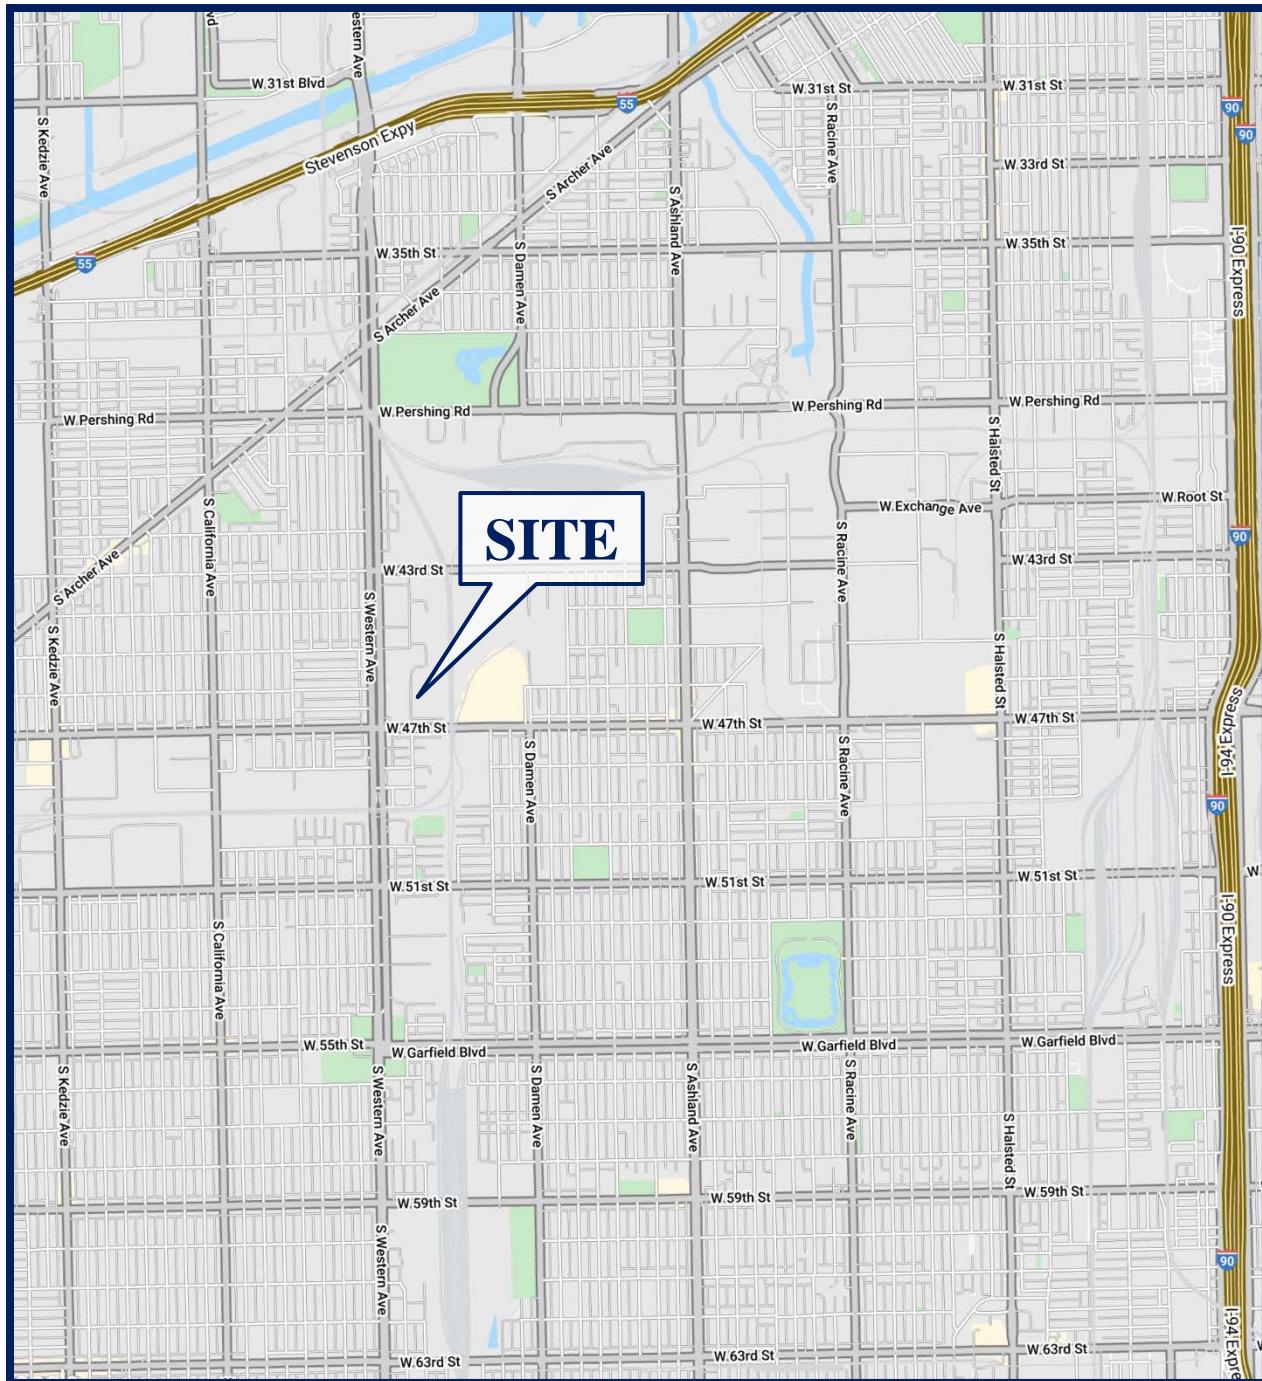

The purpose of this study was to examine existing traffic conditions, assess the impact that the proposed development will have on traffic conditions in the area, and determine if any improvements to the transportation system are required to accommodate the proposed development. **Figure 1** shows the location of the site in relation to the area street system. **Figure 2** shows an aerial view of the site.

The sections of this report present the following:

- Existing street conditions
- A description of the proposed development
- Directional distribution of the development traffic
- Vehicle trip generation for the development
- Future traffic conditions including access to the development.
- Traffic analyses for the weekday morning and weekday evening peak hours
- Evaluation and recommendations with respect to adequacy of the site access, on-site circulation, and adjacent street system.

Traffic capacity analyses were conducted for the weekday morning and weekday evening peak hours for the following conditions:

1. Year 2021 Base Conditions – Analyzes the capacity of the existing roadway system using peak hour traffic volumes conducted in 2021 and adjusted to represent pre-pandemic conditions.
2. Year 2027 Total Projected Conditions – Analyzes the capacity of the future roadway system using the projected traffic volumes that include the Year 2021 base traffic volumes, ambient area growth not attributable to any particular development, and the additional traffic estimated to be generated by the proposed development.

*Warehouse/Distribution Development
Chicago, Illinois*

2. Existing Conditions

Existing transportation conditions in the vicinity of the site were documented based on field visits conducted by KLOA, Inc. in order to obtain a database for projecting future conditions. The following provides a description of the geographical location of the site, physical characteristics of the area street system including lane usage and traffic control devices, and existing peak hour traffic volumes.

Site Location

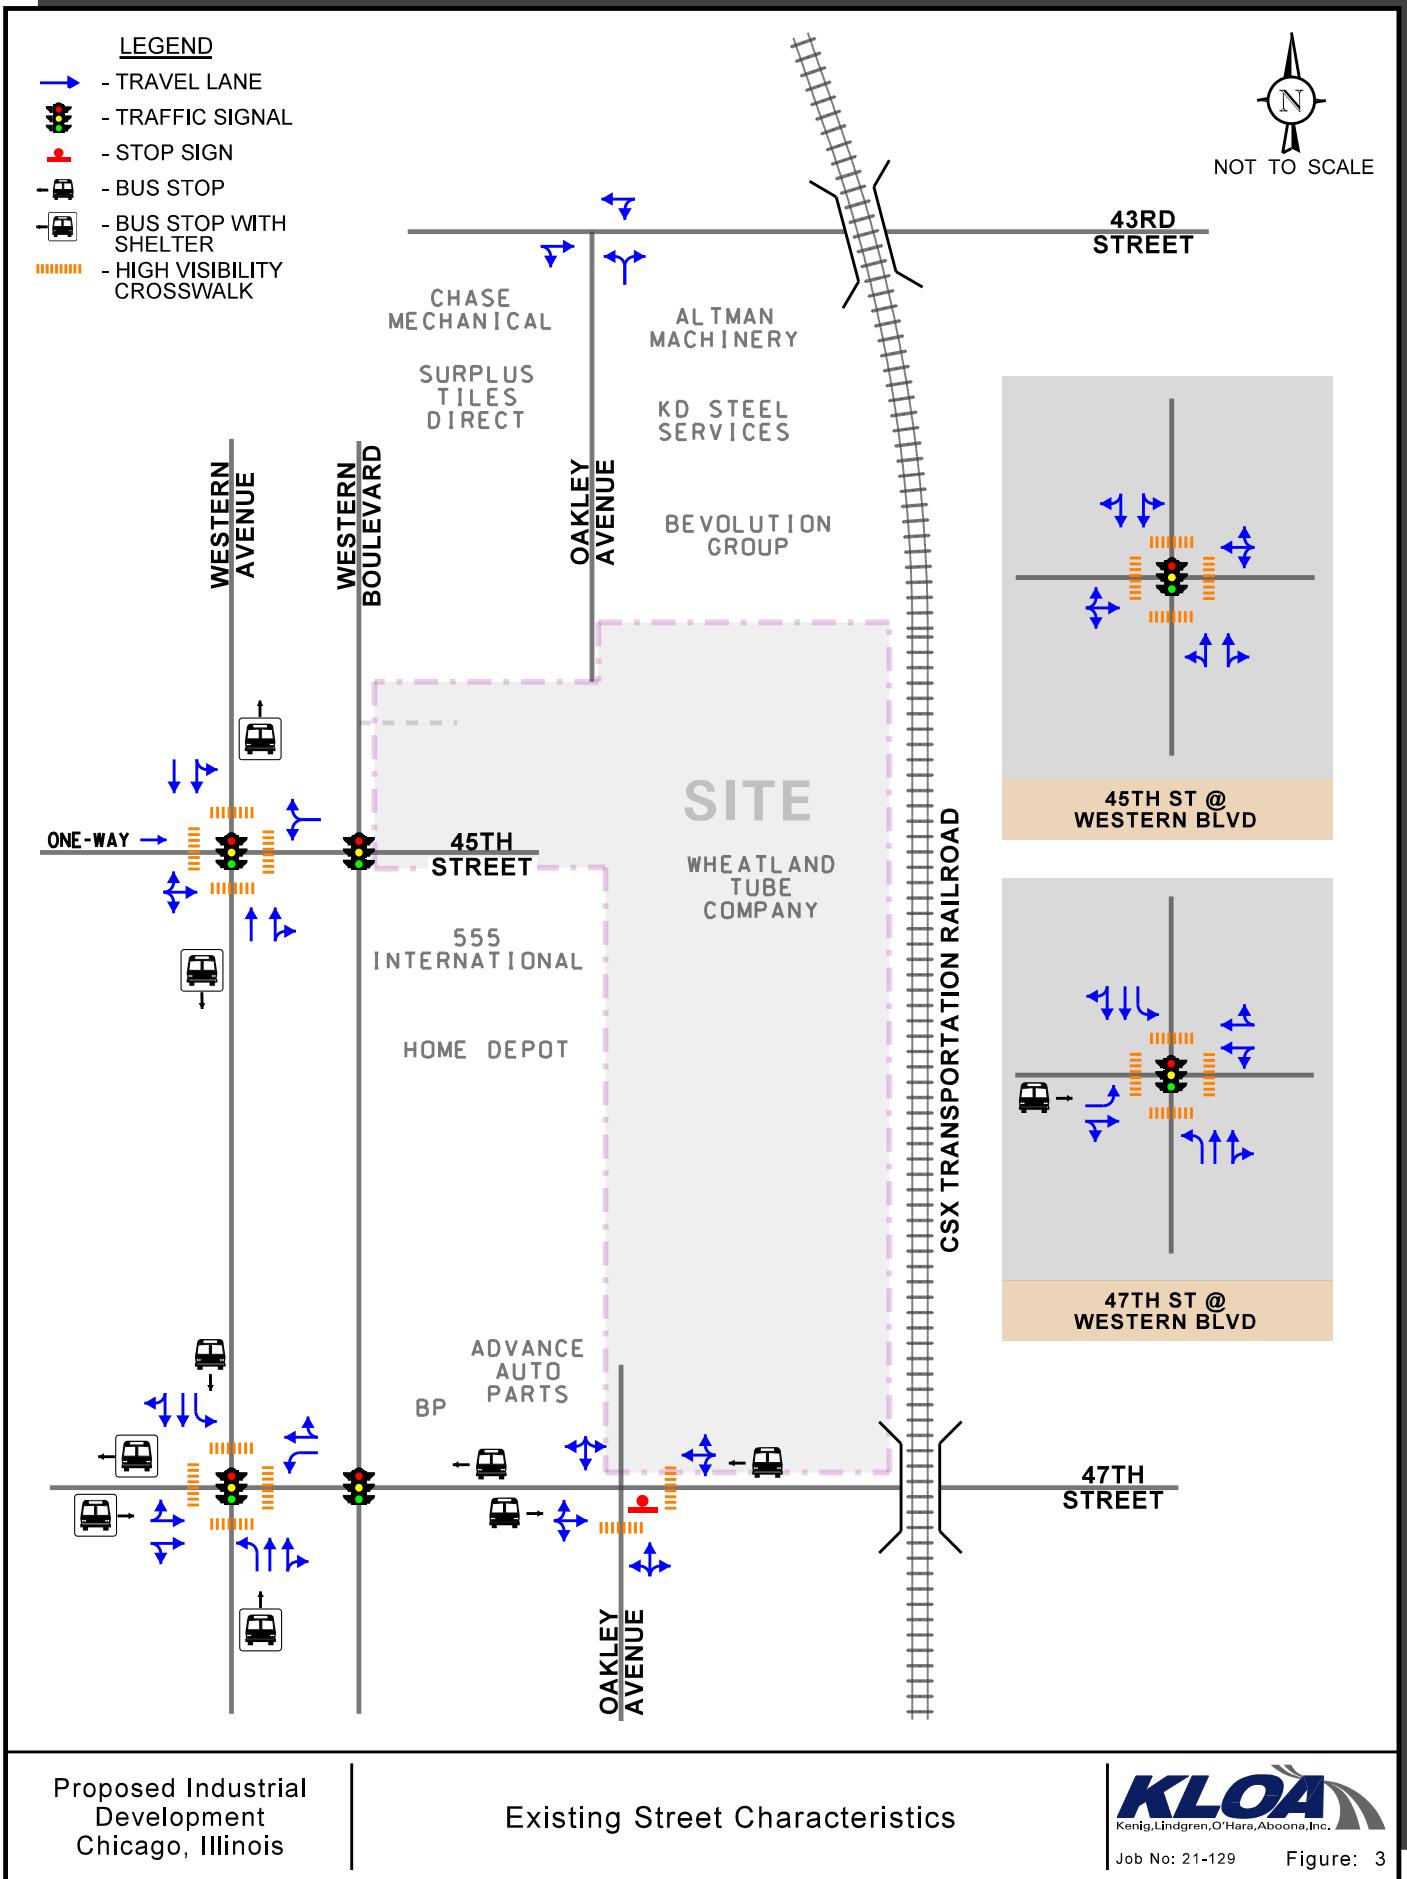

The site, which currently contains the Wheatland Tube Company is generally bounded by Bevolution Group and the 4425 Western Boulevard industrial building to the north, the CSX Transportation railroad tracks to the east, Home Depot, 555 International, and Western Boulevard to the west, and the 47th Street to the south. The area offers a mixture of residential, industrial, and commercial uses. Chase Mechanical, Surplus Tiles Direct, Altman Machinery Company, and KD Steel are located north of the site. A BP gas station and Advance Auto Parts are located in the northeast quadrant of the intersection of Western Boulevard and 47th Street.

Existing Street System Characteristics

The characteristics of the existing streets near the development are described below and illustrated in **Figure 3**. All streets are under the jurisdiction of the Chicago Department of Transportation (CDOT) unless otherwise noted.

Western Avenue is a north-south, principal arterial street that provides two lanes in each direction and runs parallel to Western Boulevard. At its signalized intersection with 45th Street, Western Avenue provides a through lane and a shared through/right-turn lane on the northbound approach and a through lane and a shared through/left-turn lane on the southbound approach. All legs of this intersection provide high visibility crosswalks. At its signalized intersection with 47th Street, Western Avenue provides an exclusive left-turn lane, a through lane, and a shared through/right-turn lane on both approaches. All legs of this intersection provide high visibility crosswalks. Parking is generally permitted on the west side of the street. Western Avenue is under the jurisdiction of the Illinois Department of Transportation (IDOT), is designated as a Strategic Regional Arterial (SRA) route, and carries an Annual Average Daily Traffic of 19,800 vehicles north of 47th Street and 22,800 vehicles south of 47th Street (IDOT 2018).

Western Boulevard is a north-south, major collector street that provides two lanes in each direction and runs parallel to Western Avenue. At its signalized intersection with 45th Street, Western Boulevard provides a shared through/left-turn lane and a shared through/right-turn lane on both approaches. All legs of this intersection provide high visibility crosswalks. At its signalized intersection with 47th Street, Western Boulevard provides an exclusive left-turn lane, a through lane, and a shared through/right-turn lane on both approaches. All legs of this intersection provide high visibility crosswalks. Parking is generally permitted on the east side of the street except for Monday through Friday 7:00 A.M. to 9:00 A.M. and 4:00 P.M. to 6:00 P.M. Western Boulevard is under the jurisdiction of IDOT, is not designated as an SRA route, and carries an Annual Average Daily Traffic of 15,400 vehicles.

47th Street is an east-west, minor arterial street that generally provides one lane in each direction. At its signalized intersection with Western Avenue, 47th Street provides a shared through/left-turn lane and a shared through/right-turn lane on the eastbound approach and an exclusive left turn lane and a shared through/right-turn lane on the westbound approach. All legs of this intersection provide high visibility crosswalks. At its signalized intersection with Western Boulevard, 47th Street provides an exclusive left turn lane and a shared through/right-turn lane on the eastbound approach and a shared through/left-turn lane and a shared through/right-turn lane on the westbound approach. At its unsignalized intersection with Oakley Avenue and the site access drive, 47th Street provides one lane in each direction and no exclusive turn lanes. The east and south legs of this intersection provide high visibility crosswalks. Parking is generally permitted on both sides of the street. West of Western Boulevard, 47th Street is under the jurisdiction of the Cook County Department of Transportation and Highways (CCDOH). East of Western Boulevard, 47th Street is under the jurisdiction of CDOT. 47th Street carries an AADT of 11,800 vehicles east of 47th Street and 19,300 vehicles west of 47th Street (IDOT 2018).

45th Street is an east-west, local street that extends west from Oakley Avenue and provides one lane in each direction. West of Western Avenue, 45th Street operates in a one-way eastbound only direction. At its signalized intersection with Western Avenue, 45th Street provides a shared left-turn/through/right-turn lane on the eastbound approach and a shared left-turn/right-turn lane on the westbound approach. All legs of this intersection provide high visibility crosswalks. At its signalized intersection with Western Boulevard, 45th Street provides a shared left-turn/through/right-turn lane on both approaches. Parking is generally permitted on both sides of the street west of Western Boulevard.

43rd Street is an east-west, major collector street that generally provides one lane in each direction. At its unsignalized intersection with Oakley Avenue, 43rd Street provides one lane in each direction and no exclusive turn lanes. Parking is generally permitted on both sides of the street. 43rd Street carries an AADT of 7,800 vehicles (IDOT 2018).

Oakley Avenue is a north south, local street that generally provides one lane in each direction. The northern segment of Oakley Avenue extends from 43rd Street to 45th Street and the southern segment extends from 47th Street to 49th Street. At its unsignalized intersection with 43rd Street, Oakley Avenue provides a shared left-turn/right-turn lane on the northbound approach. At its unsignalized intersection with 47th Street, Oakley Avenue provides a shared left-turn/through/right-turn lane on the northbound approach and is under stop sign control. Parking is generally permitted on both sides of the street.

Alternative Modes of Transportation

Accessibility to and from the area is enhanced by the various alternative modes of transportation serving the area as summarized below.

Public Transportation. The area is served by the Chicago Transit Authority (CTA) rapid transit via the Western Orange Line station located approximately 1,500 feet southwest of the site. The CTA Orange Line provides rapid transit rail service between the “Loop” and Midway Airport. Service is provided seven days a week and on holidays.

In addition, the following bus routes serve the immediate area and have stops near the facility:

Route 47 (47th) provides service along 47th Street from Lake Park Avenue to Midway Airport. Service is provided seven days a week and on holidays from approximately 4:00 A.M. to 12:30 A.M. Notable stops include the CTA Green, Red, and Orange lines and Tilden High School.

Route 48 (South Damen) provides service along South Damen Avenue from the Western Avenue Orange Line station to 87th Street. Service is provided Monday through Friday from approximately 6:30 A.M. to 9:30 A.M. and 2:00 P.M. to 6:30 P.M.

Route 49 (Western) provides service along Western Avenue from Berwyn Avenue to 79th Street. Service is generally provided 24-hours a day every day of the week, including holidays (Night Owl Service provided on Route N49). Notable stops include the CTA Brown, Blue (O'Hare and Forest Park Branches), Pink, and Orange lines as well as multiple Metra stations.

Route X49 (Western Express) provides service along Western Avenue from Berwyn Avenue to 79th Street. This route makes limited stops during the weekday morning (5:30 A.M. to 10:15 A.M.) and evening (2:30 P.M. to 7:00 P.M.) rush hours.

Route 94 (California) provides service along California Avenue from Addison Street to 74th Street. Service is provided seven days a week and on holidays from approximately 5:00 A.M. to 11:30 P.M. Notable stops include the CTA Green, Pink, and Orange lines and Mount Sinai Hospital.

Pedestrian Accommodations. Sidewalks are provided on both sides of 43rd Street, 45th Street, 47th Street, and the southern segment of Oakley Avenue and on the west side of Western Avenue and the east side of Western Boulevard. High-visibility crosswalks are provided at all signalized intersection within the study area and on the east and south legs of the intersection of 47th Street with Oakley Avenue.

Bike Facilities. According to the City of Chicago's *Streets for Cycling Plan 2020*, Western Avenue and Western Boulevard are as a Crosstown Bike Route.

Year 2021 Base Traffic Volumes

In order to determine current traffic conditions in the vicinity of the site, KLOA, Inc. conducted peak period traffic counts using Miovision Scout Video Collection Units on Tuesday, June 1 and 2, 2021 during the weekday morning (6:00 A.M. to 9:00 A.M.) and weekday evening (3:00 P.M. to 6:00 P.M.) peak periods at the following intersections:

- Western Avenue with 45th Street
- Western Avenue with 47th Street
- Western Boulevard with 45th Street
- Western Boulevard with 47th Street
- 43rd Street with Oakley Avenue
- 47th Street with Oakley Avenue and the site access drive

The results of the traffic counts indicated that the weekday morning peak hour of traffic occurs from 7:30 A.M. to 8:30 A.M. and the weekday evening peak hour of traffic occurs from 3:30 P.M. to 4:30 P.M. Copies of the traffic count summary sheets are included in the Appendix. In order to accurately represent Year 2021 conditions due to the ongoing pandemic, the traffic volumes were compared with hourly counts previously conducted by IDOT on Western Boulevard south of the site in 2018. Based on the comparison, the 2021 traffic counts were increased by 25 percent during the weekday morning peak hour only.

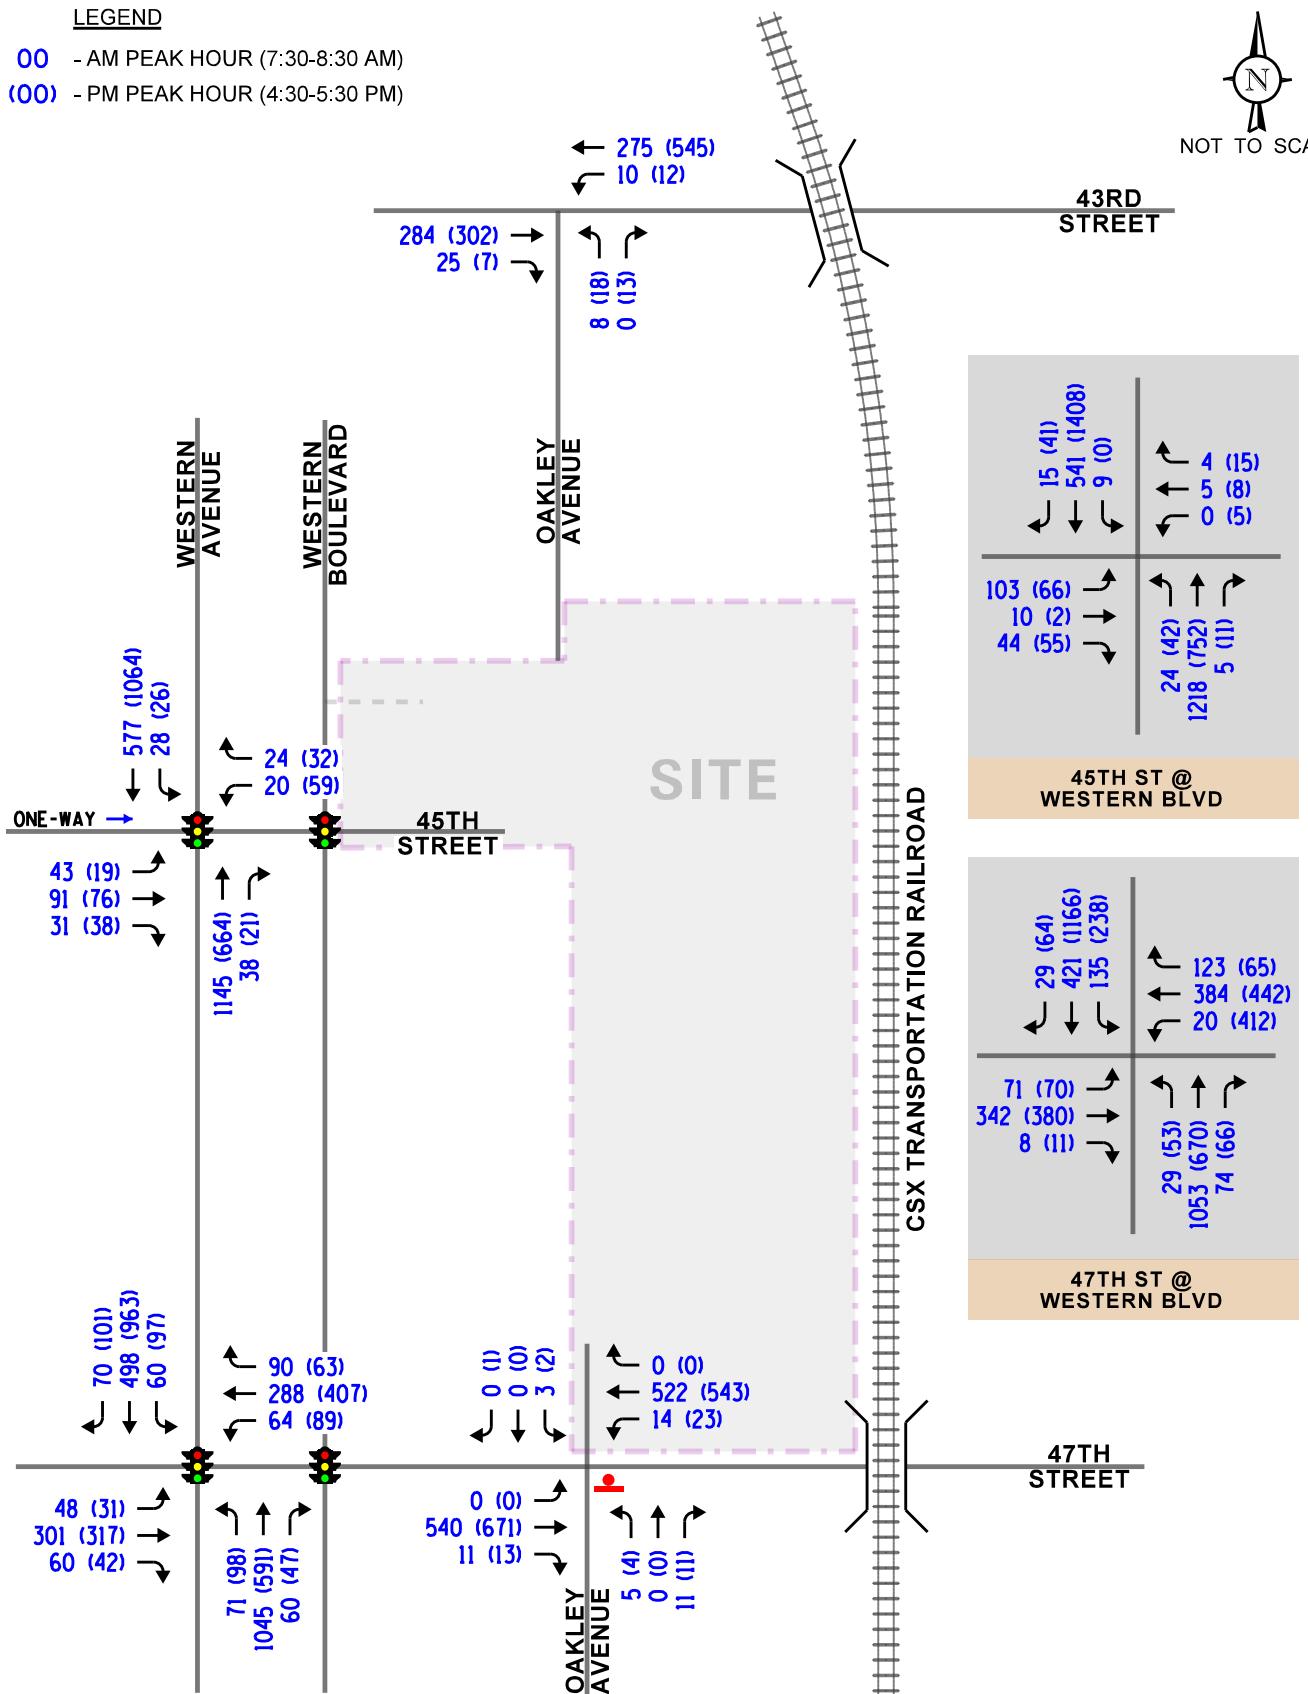

Figure 4 illustrates the Year 2021 base peak hour vehicle traffic volumes, inclusive of heavy vehicles. **Figure 5** illustrates the Year 2021 base heavy vehicle peak hour traffic volumes. **Figure 6** illustrates the existing pedestrian and bicycle volumes, showing direction of travel.

3. Traffic Characteristics of the Proposed Development

In order to properly evaluate future traffic conditions in the surrounding area, it was necessary to determine the traffic characteristics of the proposed development, including the directional distribution and volumes of traffic that it will generate.

Proposed Development Plan

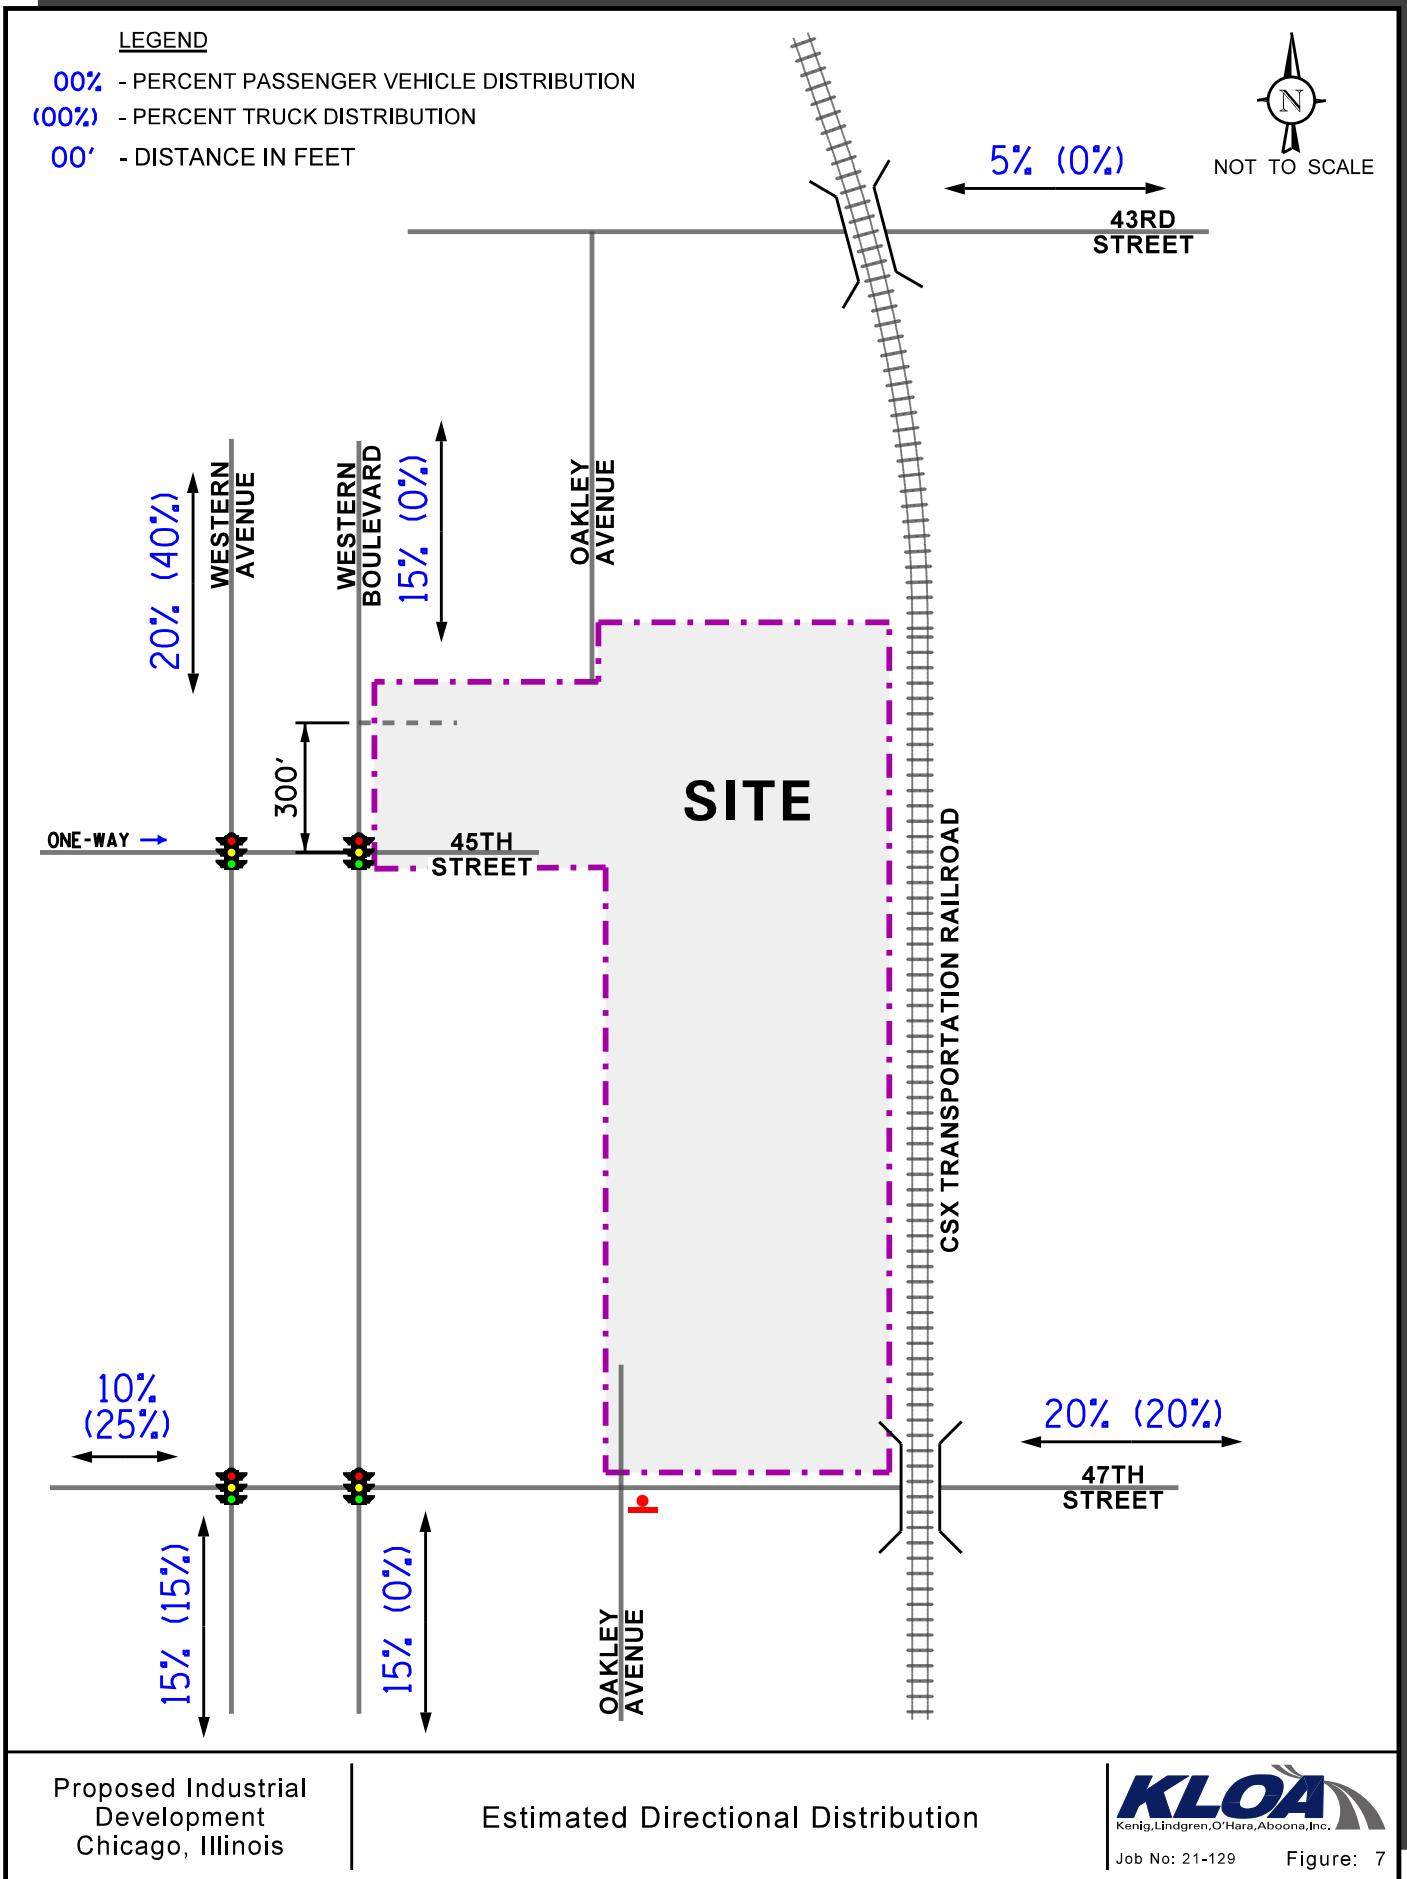

As proposed, the site will be developed with approximately 588,880 square feet of warehouse/distribution space in three buildings. Access to the development is proposed to be provided as follows:

- Via 45th Street which is signalized with Western Avenue and Western Boulevard and Oakley Avenue which is unsignalized at its intersection with 43rd Street.
- A full movement access drive on 47th Street located approximately 500 feet east of Western Boulevard opposite Oakley Avenue. This access drive will provide one inbound lane and one outbound lane wide enough to accommodate truck turning movements with outbound movements under stop sign control. This access drive will replace an existing access drive at this location serving Wheatland Tube Company including its truck traffic.
- A full movement access drive on the east side of Western Boulevard located approximately 300 feet north of 45th Street. This access drive, which will primarily serve the approximate 63,320 square-foot building, will provide one inbound lane and one outbound lane with outbound movements under stop sign control.

A copy of the preliminary site plan is included in the appendix.

Directional Distribution

The directions from which employee and truck traffic will approach and depart the site was estimated based on existing travel patterns, as determined from the traffic counts and the proposed access system of the development. **Figure 7** illustrates the directional distribution of traffic. It should be noted that all truck traffic is expected to approach and depart the site via 45th Street, which has a signalized intersection with Western Boulevard and Western Avenue, or via the 47th Street access drive which currently serves truck traffic from Wheatland Tube Company.

Peak Hour Traffic Volumes

The total number of peak hour vehicle trips estimated to be generated by the proposed industrial development was based on vehicle trip generation rates contained in *Trip Generation Manual*, 11th Edition, published by the Institute of Transportation Engineers (ITE) for Land-Use Code 150 (Warehouse). **Table 1** summarizes the trips projected to be generated by the development during the peak hours and on a daily basis. **Table 5** summarizes the trips projected to be generated by the development throughout the day. Copies of the ITE trip generation sheets are included in the Appendix.

Table 1

23:00	1	0	1	2	6	8	3	6	9
Total	177	177	354	308	308	616	485	485	970

Based on daily trips (Table 1) and ITE's Hourly Distribution of Entering and Exiting Truck Trips and Vehicle Trips tables.

4. Projected Traffic Conditions

The total projected traffic volumes include the existing traffic volumes, increase in background traffic due to growth, and the traffic estimated to be generated by the proposed subject development.

Development Traffic Assignment

The estimated weekday morning and weekday evening peak hour traffic volumes that will be generated by the proposed development were assigned to the street system in accordance with the previously described directional distribution (Figure 7). **Figure 8** illustrates the traffic assignment of the new passenger vehicle trips for the development. **Figure 9** illustrates the traffic assignment of the new truck trips for the development.

Ambient Traffic Growth

To account for any additional increase in traffic due to other factors or developments not previously discussed, an ambient growth factor of 0.5 percent per year was also applied to the study area over a six-year period to represent Year 2027 no-build conditions. Furthermore, in order to account for the increase in population in the study area, bicycle and pedestrian volumes were increased by 10 percent at each intersection. **Figure 10** illustrates the Year 2027 No Build Volumes.

Total Projected Traffic Volumes

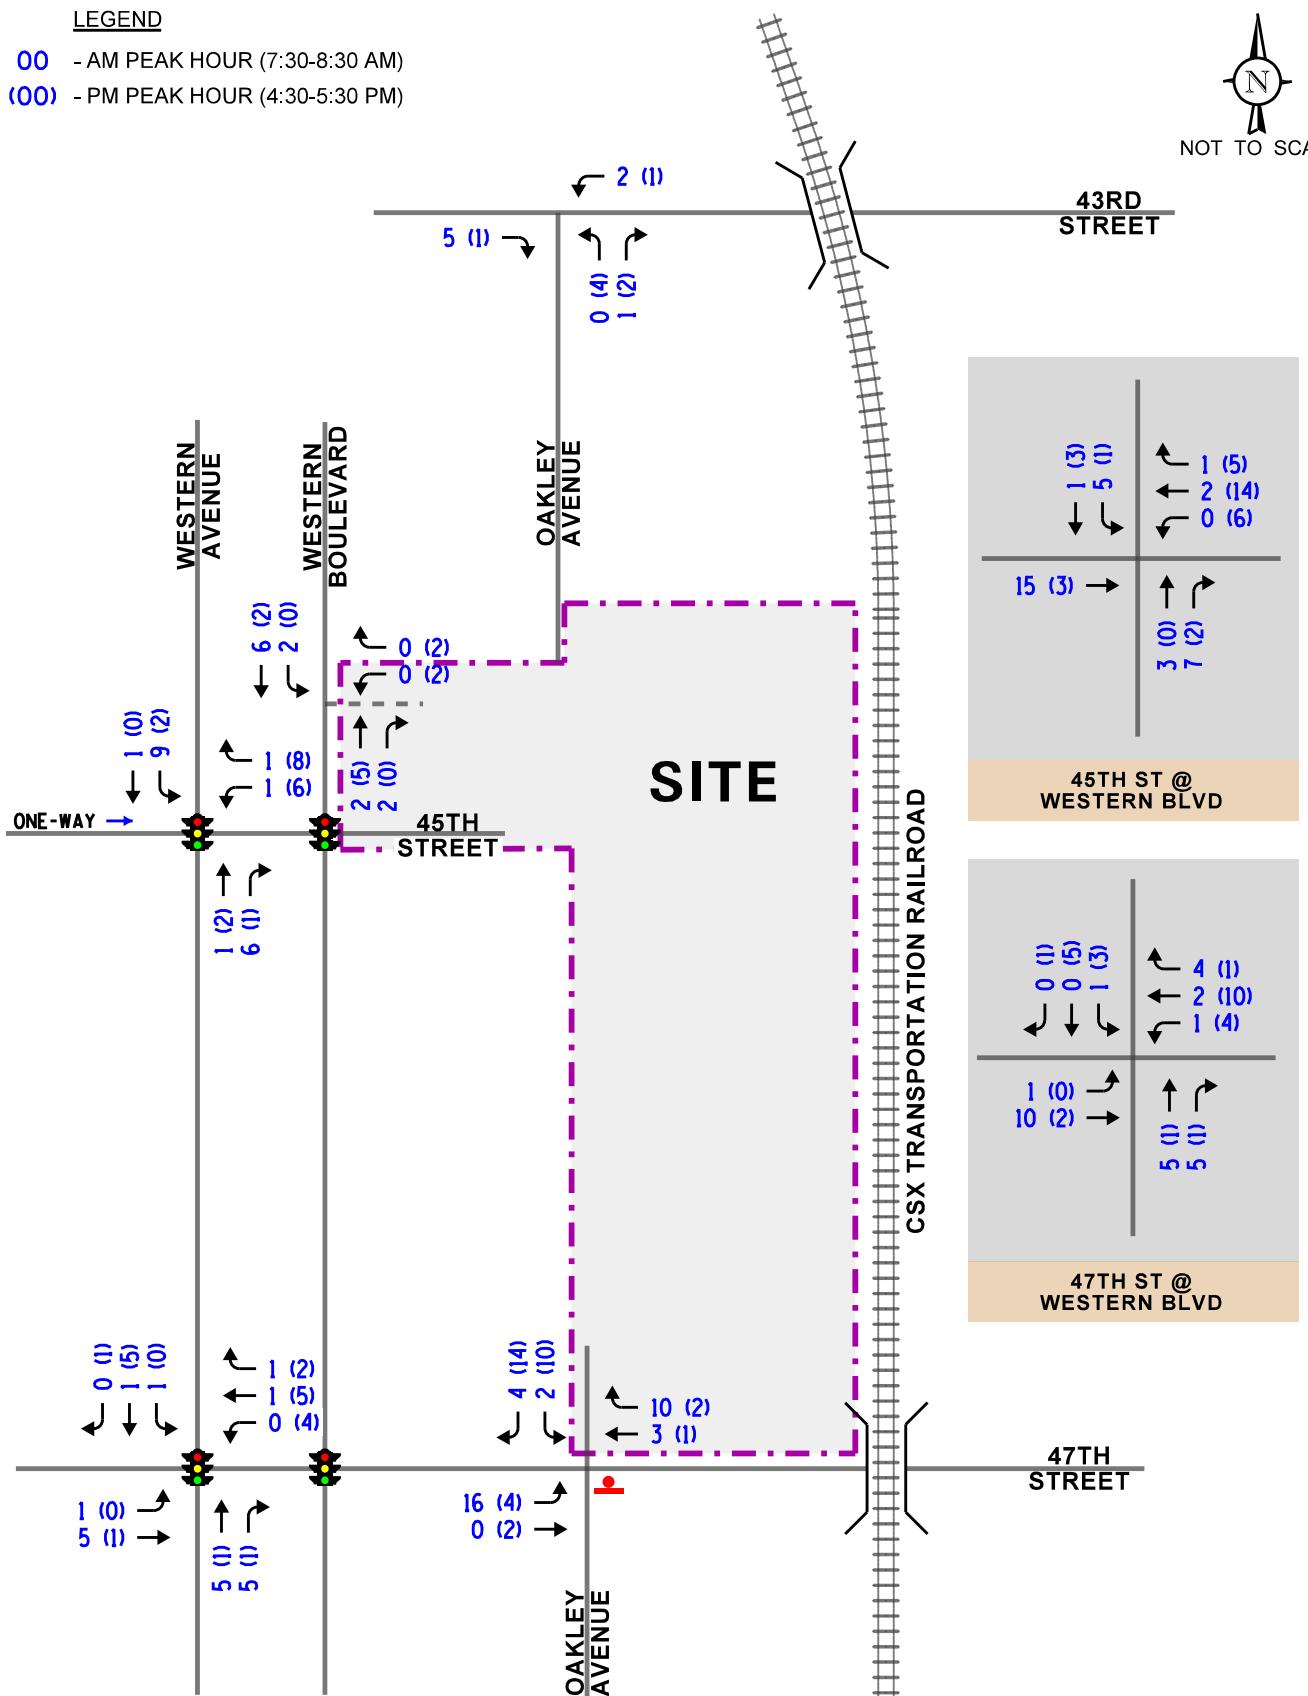

The Year 2021 base traffic volumes increased by the ambient growth in the area, were combined with the new peak hour traffic volumes generated by the subject development to determine the Year 2027 total traffic volumes, shown in **Figure 11**. It should be noted that the existing traffic turning to and from the Wheatland Tube Company access drive on 47th Street was removed from the area roadway system, but no traffic was removed from 45th Street or Oakley Avenue.

5. Traffic Analysis and Recommendations

The following provides an evaluation conducted for the weekday morning and weekday evening peak hours. The analysis includes conducting capacity analyses to determine how well the street system and access drives are projected to operate and whether any street improvements or modifications are required.

Traffic Analyses

Intersection analyses were performed for the weekday morning and weekday evening peak hours for the Year 2021 base and Year 2027 total projected traffic volumes.

The traffic analyses were performed using the methodologies outlined in the Transportation Research Board's *Highway Capacity Manual (HCM), 6th Edition* and analyzed using Synchro/SimTraffic 11 software. The analysis for the signalized intersections were conducted utilizing actual cycle lengths, phasings, and offsets.

The analyses for the unsignalized intersections determine the average control delay to vehicles at an intersection. Control delay is the elapsed time from a vehicle joining the queue at a stop sign (includes the time required to decelerate to a stop) until its departure from the stop sign and resumption of free flow speed. The methodology analyzes each intersection approach controlled by a stop sign and considers traffic volumes on all approaches and lane characteristics.

The ability of an intersection to accommodate traffic flow is expressed in terms of level of service, which is assigned a letter from A to F based on the average control delay experienced by vehicles passing through the intersection. The *Highway Capacity Manual* definitions for levels of service and the corresponding control delay for signalized intersections and unsignalized intersections are included in the Appendix of this report.

Summaries of the traffic analysis results showing the level of service and overall intersection delay (measured in seconds) for the Year 2021 base and Year 2027 total projected conditions are presented in **Tables 3** through **8**. A discussion of the intersections follows. Summary sheets for the capacity analyses are included in the Appendix.

LOS = Level of Service Delay is measured in seconds.				

Discussion and Recommendations

The following summarizes how the intersections are projected to operate and identifies any street and traffic control improvements necessary to accommodate the development-generated traffic.

Western Avenue with 45th Street

The results of the capacity analysis indicate that overall, this intersection currently operates at Level of Service (LOS) B during the weekday morning and weekday evening peak hours. Furthermore, all movements operate at an acceptable LOS D or better during both peak hours and through movements on Western Avenue operate at LOS B or better.

Under Year 2027 total projected conditions, the intersection is projected to continue operating at LOS B during the weekday morning and weekday evening peak hours with increases in delay of less than one second. Furthermore, all movements are projected to continue to operate at an acceptable LOS D or better during both peak hours and through movements on Western Avenue are projected to continue to operate at LOS B or better. As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no street improvements or traffic signal modifications will be required.

Western Avenue with 47th Street

The results of the capacity analysis indicate that overall, this intersection currently operates at LOS A during the weekday morning peak hour and LOS B during the weekday evening peak hour. Furthermore, all movements operate at an acceptable LOS C or better during both peak hours and through movements on Western Avenue operate at LOS B or better.

Under Year 2027 total projected conditions, the overall intersection is projected to continue operating at the same LOS during the weekday morning and weekday evening peak hours with increases in delay of approximately one to two seconds. Furthermore, the westbound approach, which will accommodate outbound site traffic, is projected to operate at LOS C during both peak hours and through movements on Western Avenue are projected to continue to operate at LOS B or better during both peak hours. As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no street improvements or traffic signal modifications will be required.

Western Avenue with 47th Street

The results of the capacity analysis indicate that overall, this intersection currently operates at LOS D during the weekday morning peak hour and LOS C during the weekday evening peak hour. Furthermore, all the intersection movements operate at an acceptable LOS D or better during both peak hours.

Under Year 2027 total projected conditions, the overall intersection is projected to continue operating at the same LOS during the weekday morning and weekday evening peak hours with increases in delay of approximately 12 and three seconds, respectively. This increase in delay is primarily the result of the northbound right-turn movement which is projected to operate at LOS E due to the nature of Western Avenue/Western Boulevard wherein northbound right-turn vehicles may be unable to turn onto 47th Street given the limited space. However, northbound through movements are able to bypass right-turning cars in the northbound through lane, this movement is projected to continue to operate with a volume to capacity ratio (v/c) of less than one, and 95th percentile queues for this movement are projected to increase by only one to two vehicles indicating that vehicles will still be able to turn a majority of the time. As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no street improvements or traffic signal modifications will be required.

Western Avenue with 47th Street

The results of the capacity analysis indicate that overall, this intersection currently operates at LOS D during the weekday morning and weekday evening peak hours. Furthermore, all the intersection movements operate at LOS E or better during both peak hours.

Under Year 2027 total projected conditions, the overall intersection is projected to continue operating at the same LOS during the weekday morning and weekday evening peak hours with increases in delay of approximately four and six seconds, respectively. Furthermore, all movements are projected to continue to operate at LOS E or better. It should be noted that westbound queues at this intersection are projected to extend up to 270 feet and will not block the location of the proposed access drive. As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no street improvements or traffic signal modifications will be required.

43rd Street with Oakley Avenue

The results of the capacity analysis indicate that the northbound movement at this intersection currently operates LOS B during the weekday morning peak hour and LOS C during the weekday evening peak hour. Furthermore, westbound left turns operate at LOS A during both peak hours.

Under Year 2027 total projected conditions, the northbound movement at this intersection, which will include outbound site traffic, is projected to continue to operate at LOS B during the weekday morning peak hour and LOS C during the weekday evening peak hour. Furthermore, westbound left turns are projected to continue to operate at LOS A during both peak hours. As such, this intersection has sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no street improvements or traffic signal modifications will be required.

47th Street with Oakley Avenue and the Site Access Drive

The results of the capacity analysis indicate that northbound (Oakley Avenue) movements at this intersection currently operate at LOS C during the weekday morning and weekday evening peak hours and southbound (Wheatland Tube Company) movements operate at LOS E during the weekday morning peak hour and LOS D during the weekday evening peak hours. Furthermore, eastbound and westbound left turns operate at LOS A during both peak hours.

A proposed, the Wheatland Tube Company Access Drive will be replaced with a full movement access drive serving the site. This access drive will provide one inbound lane and one outbound lane wide enough to accommodate truck turning movements with outbound movements under stop sign control.

Under Year 2027 total projected conditions, the northbound (Oakley Avenue) movement at this intersection is projected to continue to operate at LOS C during the weekday morning peak hour and LOS C during the weekday evening peak hour and the southbound (Proposed Access Drive) access drive is projected to operate at LOS C during the weekday morning peak hour and LOS D during the weekday evening peak hours. Furthermore, eastbound and westbound left turns are projected to operate at LOS B or better during both peak hours with 95th percentile queues of one two vehicles. As such, this access drive will be adequate in accommodating the traffic generated by the development and will have a limited impact on Oakley Avenue and 47th Street traffic.

Western Boulevard with the Proposed Site Access Drive

As proposed, a full movement access drive will be provided on the east side of Western Boulevard located approximately 300 feet north of 45th Street. This access drive, which will primarily serve the approximate 63,320 square-foot building, will provide one inbound lane and one outbound lane with outbound movements under stop sign control.

The results of the capacity analysis indicate that outbound movements from the access drive on to Western Boulevard are projected to operate at LOS D during the weekday evening peak hour. Furthermore, the southbound left-turn movement from Western Boulevard on to the access drive is projected to operate at LOS B during the weekday morning peak hour. As such, this access drive will be adequate in accommodating the traffic generated by the development.

6. Conclusion

Based on the preceding analyses and recommendations, the following conclusions have been made:

- Access to the development is proposed to be provided as follows:
 - Via 45th Street which is signalized with Western Avenue and Western Boulevard and Oakley Avenue which is unsignalized at its intersection with 43rd Street.
 - A full movement access drive on 47th Street located approximately 500 feet east of Western Boulevard opposite Oakley Avenue. This access drive will provide one inbound lane and one outbound lane wide enough to accommodate truck turning movements with outbound movements under stop sign control. This access drive will replace an existing access drive at this location serving Wheatland Tube Company including its truck traffic.
 - A full movement access drive on the east side of Western Boulevard located approximately 300 feet north of 45th Street. This access drive, which will primarily serve the approximate 63,320 square-foot building, will provide one inbound lane and one outbound lane with outbound movements under stop sign control.
- Area intersections have sufficient reserve capacity to accommodate the traffic estimated to be generated by the proposed development and no roadway improvements or traffic control modifications are required.
- The proposed access system will be adequate in accommodating the traffic estimated to be generated by the development.
- The proposed development will replace the Wheatland Tube Company which operates with a similar access system and generates truck traffic.

Level of Service Criteria

LEVEL OF SERVICE CRITERIA

Signalized Intersections

Level of Service	Interpretation	Average Control Delay (seconds per vehicle)
A	Favorable progression. Most vehicles arrive during the green indication and travel through the intersection without stopping.	≤ 10
B	Good progression, with more vehicles stopping than for Level of Service A.	$>10 - 20$
C	Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear. Number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.	$>20 - 35$
D	The volume-to-capacity ratio is high and either progression is ineffective or the cycle length is too long. Many vehicles stop and individual cycle failures are noticeable.	$>35 - 55$
E	Progression is unfavorable. The volume-to-capacity ratio is high and the cycle length is long. Individual cycle failures are frequent.	$>55 - 80$
F	The volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.	>80.0

Unsignalized Intersections

Level of Service	Average Total Delay (SEC/VEH)
A	$0 - 10$
B	$> 10 - 15$
C	$> 15 - 25$
D	$> 25 - 35$
E	$> 35 - 50$
F	> 50

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 33 (30%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.78

Intersection Signal Delay: 34.3

Intersection LOS: C

Intersection Capacity Utilization 94.0%

ICU Level of Service F

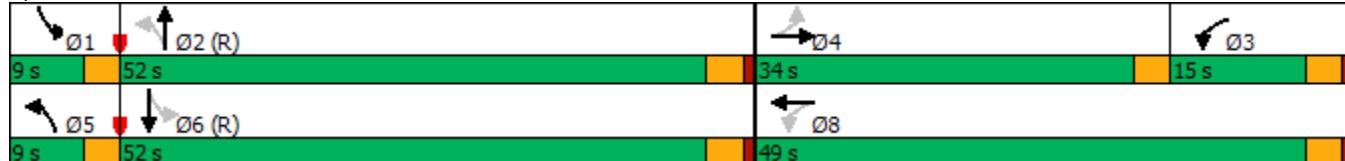

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Western Avenue & 47th Street

Lanes, Volumes, Timings
4: Western Boulevard & 47th Street

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 33 (30%), Referenced to phase 2:NBTL and 6:SBTL, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.81

Intersection Signal Delay: 37.1

Intersection LOS: D

Intersection Capacity Utilization 96.5%

ICU Level of Service F

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Western Avenue & 47th Street

Lanes, Volumes, Timings
4: Western Boulevard & 47th Street
